Synopsis

special note: using the "File > Place" command will create a LINK to an external file, such that if you update the external file, the latest version of it will show up here the next time you load Illustrator, and if you move/rename/delete the file it will no longer show up in Illustrator at all. If instead you want to EMBED the graphic, then the best thing to do is open it separately within Illustrator, then copy/paste it into your poster document.
