

Sexually Transmitted Diseases Developmental Awards

CALL FOR APPLICATIONS

The National Institute of Allergy and Infectious Diseases Sexually Transmitted Infections and Topical Microbicides Cooperative Research Center announces the availability of Developmental Awards for research on sexually transmitted infections (excluding HIV). The purpose of the award is to encourage new investigators (or investigators new to STD) to pursue careers in STD research. These awards are intended to provide a period of support for the investigator so that he/she can establish an independent project and acquire preliminary data for successful submission of a NIH R- or K-series application.

Funding is available to persons who have recently achieved faculty status (including acting appointments) or those actively transitioning to faculty-level appointments at one of the STI-TM CRC sites.

Previous applicants (those not receiving awards) are invited to re-apply.

Note: These are mentored career development awards. A detailed career development plan is part of a competitive application.

The Developmental Awards will provide up to \$95,600 (direct costs) supporting 18-month projects beginning approximately March 1, 2008. Funds may be used for salary, technical support, supplies, equipment, or travel. Qualified minority and women scientists are encouraged to apply.

Application instructions: http://depts.washington.edu/cfas/STI_TM_CRC/funding.html

Final Applications Must be Submitted by January 7, 2008.
