

Department Resources - Department Policies & Procedures - Facilities & Research: PROCEDURE - Chemical Inventory

All laboratory and stockroom chemicals MUST be inventoried for compliance with Seattle Fire Department Fire codes.

All chemicals initially received via the Research Stockroom are given a barcode label and scanned into the chemical database. The location is initially recorded as Chem Stockroom. Chemicals ordered and picked up for research labs or the Undergraduate Stockroom are scanned OUT of the Research Stockroom and the new location entered.

Chemicals purchased and sold in the Research Stockroom are scanned and a new location entered upon sales.

Please see the Research Stockroom Manager (BAG 36 or x3-1624) for more information.
