

Dr. SooYeun Kim is appointed as a new research assistant professor, Mechanical Engineering

Sooyeun Kim who was working as a research associate since 2009 at CIMS, is now appointed as a Research Assistant Professor, effective on May 1, 2012, at Mechanical Engineering. She will work initially on the NSF EFRI-SEED project, Energy-Harvesting Electrochromic Window project while she will develop her own research programs. She has been the manager of the CIMS Chemistry Laboratory for the last three years and will be so. She obtained her B.S. and M.S. degrees in Chemistry, and her Ph.D. degree in Materials Science and Engineering, University of Washington. Dr. Kim's research expertise includes design and characterization of organic materials, particularly conjugated polymers, and design of electrochromic windows, and dye-sensitized solar cells.
