

Expand your horizons by participating in field and/or laboratory research in coastal environments on the Texas Gulf of Mexico coast **June 3 - July 31, 2014!**

The major objective of the 9-week annual Summer Undergraduate Research Focus - Climate Change, Global Warming, and the Health of Texas Bays and Estuaries - is to provide research experiences and training for undergraduate students.

The common focus of the research activities is investigation of the effects of human activities on the environment, particularly the coastal environment. Research experiences will take place in the labs of College of Science and Engineering at Texas A&M University-Corpus Christi faculty members.

The goals of the program are to improve the critical thinking ability and communication skills of the students, to provide hands-on research and field experiences, and to foster life-long science learning.

**Student Benefits**

Hands-on Research Experience	\$5000 Stipend
Field Experiences	Food Allowance
Professional Skills Development	On-campus Housing Provided
Final Symposium	

We are currently taking applications – through 3/3/2014.
