

A one-year full-time lab technician position is available at Dauphin Island Sea Lab to work with Dr. Kelly Dorgan on benthic ecology and invertebrate biomechanics. I am currently setting up my lab and am looking for someone to help set up and manage the lab and assist with research in the lab, including mechanical testing experiments on sediments, collecting animals and sorting samples, and conducting behavior experiments. This position will also include some data analysis, and experience with ImageJ, Matlab, or other computer programming languages would be useful but not required. For more information, see <http://faculty.disl.org/kdorgan.html>

I am ideally looking for a recent graduate who is interested in obtaining research experience before applying to graduate school and is motivated and independent. Applicants should have a BS in biology, marine science, or a related field, background and interest in marine invertebrates, and some previous research experience.

Dauphin Island Sea Lab is located on Dauphin Island, AL, on the gulf coast. There's a great community at the lab, cost of living is low, and the city of Mobile is ~45 min away. For more information on DISL, see [www.disl.org](http://www.disl.org)

This position is for a year, with extension dependent on funding and job performance. Salary will be commensurate with experience.

Start date: mid-July preferred, but negotiable (from early June to late August)

Applications, including a resume, undergraduate transcripts (unofficial is fine), one-page cover letter, and names and contact info for three references should be sent to [kdorgan@disl.org](mailto:kdorgan@disl.org). Review of applications will begin March 1 and will continue until the position is filled.
