

Post-Doctoral Research Associate: River Zooplankton

University of Illinois, Illinois Natural History Survey, Illinois River
Biological Station, Havana IL

Responsibilities: 1) Assess the impact of Asian carp population dynamics on zooplankton in a large navigable river, and 2) assess spatial or temporal patterns and trends among zooplankton species and between habitats over multiple years.

Qualifications: In addition to familiarity with analysis of plankton and large river ecology, applicants must also clearly demonstrate ability to analyze large datasets and peer-reviewed publication of results is a primary expectation. Must have obtained Ph.D. by the date of hire or within the last five years.

Salary: 38-44,000/yr + benefits, conference support

Ad Closing Date: April 25 2014 and continue until a suitable candidate has been identified.
