

Marine Geochemistry tenure-track post at Seoul National University

Seoul National University is expecting an opening for a tenure-track faculty position in Marine Geosciences with special emphasis on Marine Geochemistry of rocks and sediment. We are accepting applicants for all level (assistant/associate/full professor). Within the School of Earth and Environmental Sciences, there are 35 faculty members divided among three major disciplines (geological sciences, oceanography and atmospheric sciences), and this particular post is to fill a recent vacancy in oceanography. We hope that the new member will complement the two existing faculty members in Marine Geology and Geophysics (one in Geophysics and the other in Sedimentology) in teaching oceanography and conducting global ocean research.

As part of university's policy on diversity, we welcome highly qualified foreign nationals.
