Job Description

Excellent position for a person who is seeking an entry-level summer internship in scientific-based environmental consulting. The Air Quality Associate Intern will be working in a challenging and variable environment that will include detail-oriented independent work and client interactions.

Job Duties:

- Estimating emissions and conducting engineering evaluations of air pollution sources
- Conducting computer modeling of air pollution dispersion
- Performing statistical and geospatial analysis of air quality data
- Analyzing pollution control measures
- Conducting air monitoring and indoor air quality analyses
- Preparing air quality permit applications
- Critically reviewing and interpreting local, state, and federal environmental regulations

Required Skills

- Candidates must have completed 6 semesters or obtained Junior status studying Chemical, Mechanical, Civil, or Environmental Engineering
- GPA of 3.5 or higher in major
- Strong written and oral communication skills
- Solid spreadsheet skills
- Ability to understand and apply environmental regulations to real-world situations
- Excellent analytical and organizational skills
- Ability to work well with a team
