

The Nature Conservancy: Oren Pollak Grasslands Research RFP

The Nature Conservancy (TNC) will be granting up to \$9,000 for assistance to a student to conduct research on grasslands in California or Oregon. Favor will be given to projects that are explicitly focused on grassland conservation and can be used to improve TNC's grassland conservation efforts across California and Oregon. Proposed projects may include, but are not restricted to, research on grassland restoration, grazing and other management practices, habitat value for target species, and community ecology.

Locating projects on TNC preserves and coordinating with TNC preserve managers is desirable but not mandatory. The final date for receipt of proposals is January 30, 2015. Notification of the award recipient will be announced no later than March 6, 2015. Any student needing assistance for the implementation of a grassland research project may apply. This includes high school, undergraduate or graduate level students. The full RFP can be found here:
