Developmental Behavioral Pediatrics Observation Matrix

	Typical Developmental	Delayed Development	Observed Parenting Styles	Resources Reviewed
Infant	6-month-old child observed in continuity clinic. Sitting up independently. Reaching and grabbing objects nicely- transferring from hand to hand. Good eye contact. Beginning babbling sounds hear throughout exam.	11-month-old child observed in NDV clinic. Just starting to sit up. Unable to transition from supine to sitting position. Left hand fistled. Unable to transfer objects from one hand to another. No vocalizations observed		<ul style="list-style-type: none"> • Early Intervention
Preschooler			Observed interaction in grocery store. Preschool aged child tried to put candy in cart. Parent calmly took candy out of cart, got down to child's level to talk to child. Child started to tantrum. Parent calmly stood by child until tantrum stopped about 1 min later.	
School Age		<p>7 yo boy observed in NDV clinic.</p> <ul style="list-style-type: none"> • Poor focus and impulse control. Continually trying to touch objects in room. • Started to tantrum in clinic when was unable to leave the room. • Unable to give answers to basic questions 	Parent making no effort during clinic visit to discourage child from touching various objects in room. Evaluator needed to prevent child from leaving room. Parent occasionally checked phone throughout clinic visit	
Adolescent	14 yo boy observed in continuity clinic. In 9 th grade. Doing well in school (1 A, 3 Bs, 1 C). Admits that he could work harder in history, but doesn't really get the point of learning all date. Reports has friends in school and good relationship with parents. Plays JV soccer, enjoys pick-up games of BB.
