List of Figures	iii
List of Tables	viii
<b>Chapter 1: Introduction</b>	<b>1</b>
<b>Chapter 2: Study of Pedestrian Behaviors in Urban Space</b>	<b>8</b>
2.1 Effects of Space Configuration and Attraction on Spatial Behavior	8
2.2 Simulation Pedestrian Dynamics and Local Movement	14
2.3 Behavior at the Individual Level	20
<b>Chapter 3: Implementing Simulations as Individual-Based Models</b>	<b>24</b>
3.1 Introduction to an Individual-based Model	24
3.2 Example Models	25
3.2.1 Continuous Individual-based Simulation	25
3.2.2 Discrete Individual-based Simulation	27
3.2.3 Cellular Automata	28
3.3 Object-oriented Programming	31
3.4 System Architecture	32
<b>Chapter 4: Representing Environment</b>	<b>38</b>
<b>Chapter 5: Representing Pedestrian Behaviors</b>	<b>44</b>
5.1 Structure of an Agent "Mouse"	44
5.1.1 External Perception	44
5.1.2 Internal States	46
5.1.3 Behavior Production System	47
5.2 Goal Structure	49

5.3 Modeling Individual Behavior	51
5.3.1 Reflex Behavior	51
5.3.2 Reactive Behavior	54
5.3.3 Motivated Behavior	62
5.4 Modeling Social Behavior	66
5.4.1 Imitation of Behavior	67
5.4.2 Induction of Behavior	68
<b>Chapter 6: Experiments</b>	<b>72</b>
6.1 About the Simulation	72
6.2 Exploring Dynamic Individual Behavior	75
6.2.1 Experiment 1: Changes of Behavior	76
6.2.2 Experiment 2: Changes of Environment	83
6.3 Exploring Complex Social Interaction	86
6.3.1 Experiment 3: Pedestrian Flow Sensitive	86
6.3.2 Experiment 4: Flow of Information	88
<b>Chapter 7: Discussion</b>	<b>89</b>
<b>References</b>	<b>92</b>
<b>Appendix A: A Guide to the Accompanying CD ROM</b>	<b>100</b>
<b>Pocket Material: CD ROM</b>	

## List of Figures

### *Number*

1.1	Westlake Plaza	1
1.2	Crist Langton's Emergence diagram illustrating the concept of complexity (Langton, 1995)	3
1.3	Emergent Property: A circular mill of army ants (Langton, 1995)	3
1.4	Example of city simulation based on the idea of Fractal City (Batty, 1994)	3
1.5	Simulation scenes from Mouse.class project	4
1.6	Pedestrian activities from the book "The Social Life of Small Urban Spaces" (Whyte, 1980)	5
1.7	Mouse Palace, a Thai-Chinese traditional toy for a child to learn about behavior and environment relationship while playing with mice, food, and wooden blocks.	6
2.1	Space syntax analysis: Axial map – global integration: London (Hillier, 1993)	13
2.2	Moment of two pedestrian groups trying to pass a narrow door. If one person has been able to pass the door, others with the same desired walking direction can follow easily (Helbing, 1994).	16
2.3	At crowded intersections there develops roundabout traffic for certain time periods (Helbing 1994)	17
2.4	An urban environment representing significant places (Jiang, 1999)	18
2.5	A snapshot of simulation of pedestrian moving purposely (Jiang, 1999)	18
2.6	Sugarscape simulation scene: yellow areas represent sugar, red and blue dots are agents ( <a href="http://www.discovery.com/area/science/life/day01.html">http://www.discovery.com/area/science/life/day01.html</a> )	19
2.7	Hierarchy of individual behavior (Based on: Baerends, 1976; McFarland, 1981; Gerhenson, 2001)	20
2.8	A hierarchy of motion behaviors (based on Blumberg, 1995; Reynolds, 1998; Gerhenson, 2001)	21
3.1	Simulated boid flock avoiding obstacles (Reynolds, 1986)	25
3.2	Steering Behavior (Reynolds, 1999)	26

3.3	Demonstrations of steering behavior (Reynolds, <a href="http://www.red3d.com/cwr/steer/">http://www.red3d.com/cwr/steer/</a> )	26
3.4	The aggregation process of 100 square cells	27
3.5	The Village of Seripe, after Mumtaz (Hillier, 1984)	27
3.6	Model of termites piling woodchips developed with the use of StarLogo. (Resnick, 1994)	28
3.7	Regular uniform of Cellular Automata	29
3.8	The model of multiple lanes and separated flows (Blue, 1999)	30
3.9	System Architecture	32
3.10	Construction of the system	34
4.1	Three (separate) basic components in an urban scene (Thiel, 1997)	38
4.2	Combination of the three basic components (Thiel, 1997)	38
4.3	Diagram shows blocks representing different geometry in urban space. (photographs of urban spaces from the book "Public Spaces Public Life" by Jan Gehl, 1996)	40
4.4	Diagram shows cheese representing attractive elements in urban space. (photographs of urban spaces from the book "Public Spaces Public Life" by Jan Gehl, 1996)	42
4.5	Gates defined at the edge of space (shown in the orange lines)	43
5.1	Field of vision based on isovist concept	45
5.2	A scale of motivation degree of Hunger Left: a state of very hungry, Right: a neutral state	46
5.3	A scale of motivation degree of hurriedness Left: high degree indicates rush, Right: low degree indicates relax)	46
5.4	Behavior production system showing connections with external perception and internal system. The feedback loops (red arrows) of internal drive and external perception are important in determining an appropriate behavior.	48
5.5	Final goal and motivated goal from the simulation scene.	50
5.6	Smooth walking line (Kovacs and Galle, 1993)	52
5.7	Cutting off the corners of lawn to make a short cut (Gehl, 1996)	52
5.8	Sketch Diagram of pink's default behavior, Wander	52

5.9	Flow chart of Wander process	52
5.10	From a simulation scene: Pink mice - wander walkers - following their temporary goals (end points of each gray lines)	53
5.11	Sketch diagram of blue's default behavior, Pass-Through	53
5.12	Flow chart of Pass-Through process	53
5.13	Sketch diagram of pink's avoiding obstacle case 2	55
5.14	Sketch diagram of pink's avoiding obstacle case 3	55
5.15	Flow chart of pink's Avoid Obstacle process	55
5.16	The actual path: using a series of intermediate goal to arrange the path towards the destination (Alexander, 1977)	56
5.17	Sketch diagram of blue's avoiding obstacle	57
5.18	Flow chart diagram of blue's Avoid Obstacle process	57
5.19	From a simulation scene: A Blue - purposive walker – picking a temporary goal (end point of a gray line) to avoid an obstacle then proceeding to a final goal (end point of an orange line)	58
5.20	Sphere influence	59
5.21	Neighborhood Field	59
5.22	Two situations in neighborhood field (evasive distance). Situation A: no moving object in range and situation B: moving object is in range, preparing to take evasion to avoid collision	60
5.23	Sketch diagram of collision avoidance	60
5.24	Flow chart diagram of collision avoidance	61
5.25	From a simulation scene: blues and pinks perform obstacle avoidance if others are in their neighborhood fields and their directions get crossed	62
5.26	Flow chart diagram shows local decision ' action selection' process of pinks	65
5.27	Flow chart diagram shows local decision ' action selection' process of blues	66
5.28	Graphics describes imitation and induction of behavior	67
5.29	Imitation of neighbors' directions	68
5.30	Blue-cheese story 1-4	68
5.31	Blue-cheese story 5-8	70
5.32	Sketch diagram of induction of behavior	71
6.1	Applet Interface	72

6.2	The vicinity of simulation scene including the ideal space surrounded the scene.	74
6.3	Two typical types of mice	76
6.4	Experiment 1, Scenario 1: Pinks moving in context-free environment	77
6.5	Experiment 1, Scenario 1: Blues moving in context-free environment	77
6.6	Experiment 1, Scenario 2: Pinks avoiding obstacles	78
6.7	Experiment 1, Scenario 2: Blues avoiding obstacles	78
6.8	Experiment 1, Scenario 3: No Green space	79
6.9	Experiment 1, Scenario 3: A Green space	79
6.10	Experiment 1, Scenario 4: Changing Behavior Simulation 1	80
6.11	Experiment 1, Scenario 4: Changing Behavior simulation2	80
6.12	The trace of movement pattern of the above scene showing the distribution of movement through time.	82
6.13	Experiment 2: Simulation Scene 1	83
6.14	Scene 1: Traced Pattern	83
6.15	Experiment 2: Simulation Scene 2	84
6.16	Scene 2: Traced pattern	84
6.17	Experiment 2: Simulation Scene 3	85
6.18	Scene 3: Traced Pattern	85
6.19	Pedestrian Flow	86
6.20	Flow sensitive model running through 547 cycles	87
6.21	Mouse conditions: Yellow mouse carries cheese; Orange mouse is hungry.	88
6.22	Flow of information simulation	88
A 1	Westlake Plaza	100
A 2	Social Life of Small Urban Spaces	100
A 3	Track the move	101
A 4	Mouse Palace	101
A 5	Parallel worlds	101
A 6	Types of behaviors	102
A 7	Individual behavior	104
A 8	Social behavior	104
A 9	System Architecture	105

A 10	Autonomous agent “Mouse”	105
A 11	Mouse ability	105
A 12	Forward moving	106
A 13	Modeling forward moving	106
A 14	Obstacle avoidance	107
A 15	Modeling obstacle avoidance	107
A 16	Collision avoidance	108
A 17	Modeling collision avoidance	108
A 18	Motivated behavior	109
A 19	Simulation scene	110
A 20	Movement pattern	111
A 21	Imitation of behavior	112
A 22	Blue Cheese Story	113
A 23	Induction of behavior	114

## List of Tables

### *Number*

2.1	When the quality of outdoor environment is good, optional activities occur with increasing frequency. Furthermore, as level of optional activity rise, the number of social activities usually increases substantially (Gehl, 1996)	13
5.1	Behavior repertoire of an agent mouse to perform the movement in the simulation	52
5.2	Interpersonal Distance based on the North American experience and suggested by Edward T. Hall, The Hidden Dimension	63
5.3	The internal states, Motivation degree and possible actions	68
5.4	The combination of two internal states and adjustment of motivation degree	69
