The main desktop layout of all Merge AIMS computers have a grey background to help differentiate them from standard desktops.

There are two types of workstation modes - one is OR and the other is PACU. Both are still grey in color but have different icon links. (IntraOp/PostOp mode)

IntraOp mode will be a blue background and PostOp mode will be a green.

All workstations in the OR's have the link to IntraOp mode on the desktop

All workstations in the PACU's have the link to PostOp mode on the desktop
Starting a case

It's very important to make sure all system checks are working.

Please verify all Status indicators are green before starting a case to insure proper communication between AIMS applications servers.

Any other color RED or YELLOW Please notify Aims Support before starting a case.

PH: 206.598.8695
PGR: 206.540.0937

All Items in the above image need to be green before starting a case. This is on the main merge startup page.
If all indicators are green start a case by pressing the Start/Resume/NewCase button. The system will ask you to login (AMC-User name and Password) same as ORCA login.

If your patient is not on this list try clicking the update procedure button. If still not on the list select “Emergency/Unknown Patient. (See instruction on how to Identify TBD case.)

When logged in select the desired patient from the case list and press OK and confirm your selection before proceeding.
