

Fisheries Oceanography 437

Assignment 5

Compare and contrast approaches used and the predicted changes to abundances, species compositions, and distributions of pelagic fishes in the northeast Pacific as reported in Cheung et al. (2015) and Hollowed and Sunby (2014). Of the two scenarios presented, which one do you think is more plausible and why?

The comparative review must be typed, double spaced, with 1" margins and should not exceed 4 pages.

Due: Mar 1, 2017
