

Seattle to Spokane: mapping Perceptions of English in Washington state

Betsy E. Evans

UNIVERSITY *of*
WASHINGTON

<http://depts.washington.edu/folkling/>

Introduction

This presentation

- Reports the results of a perceptual study that explores perceptions of the English spoken in the state by long-time residents of Washington State (WA)

Introduction

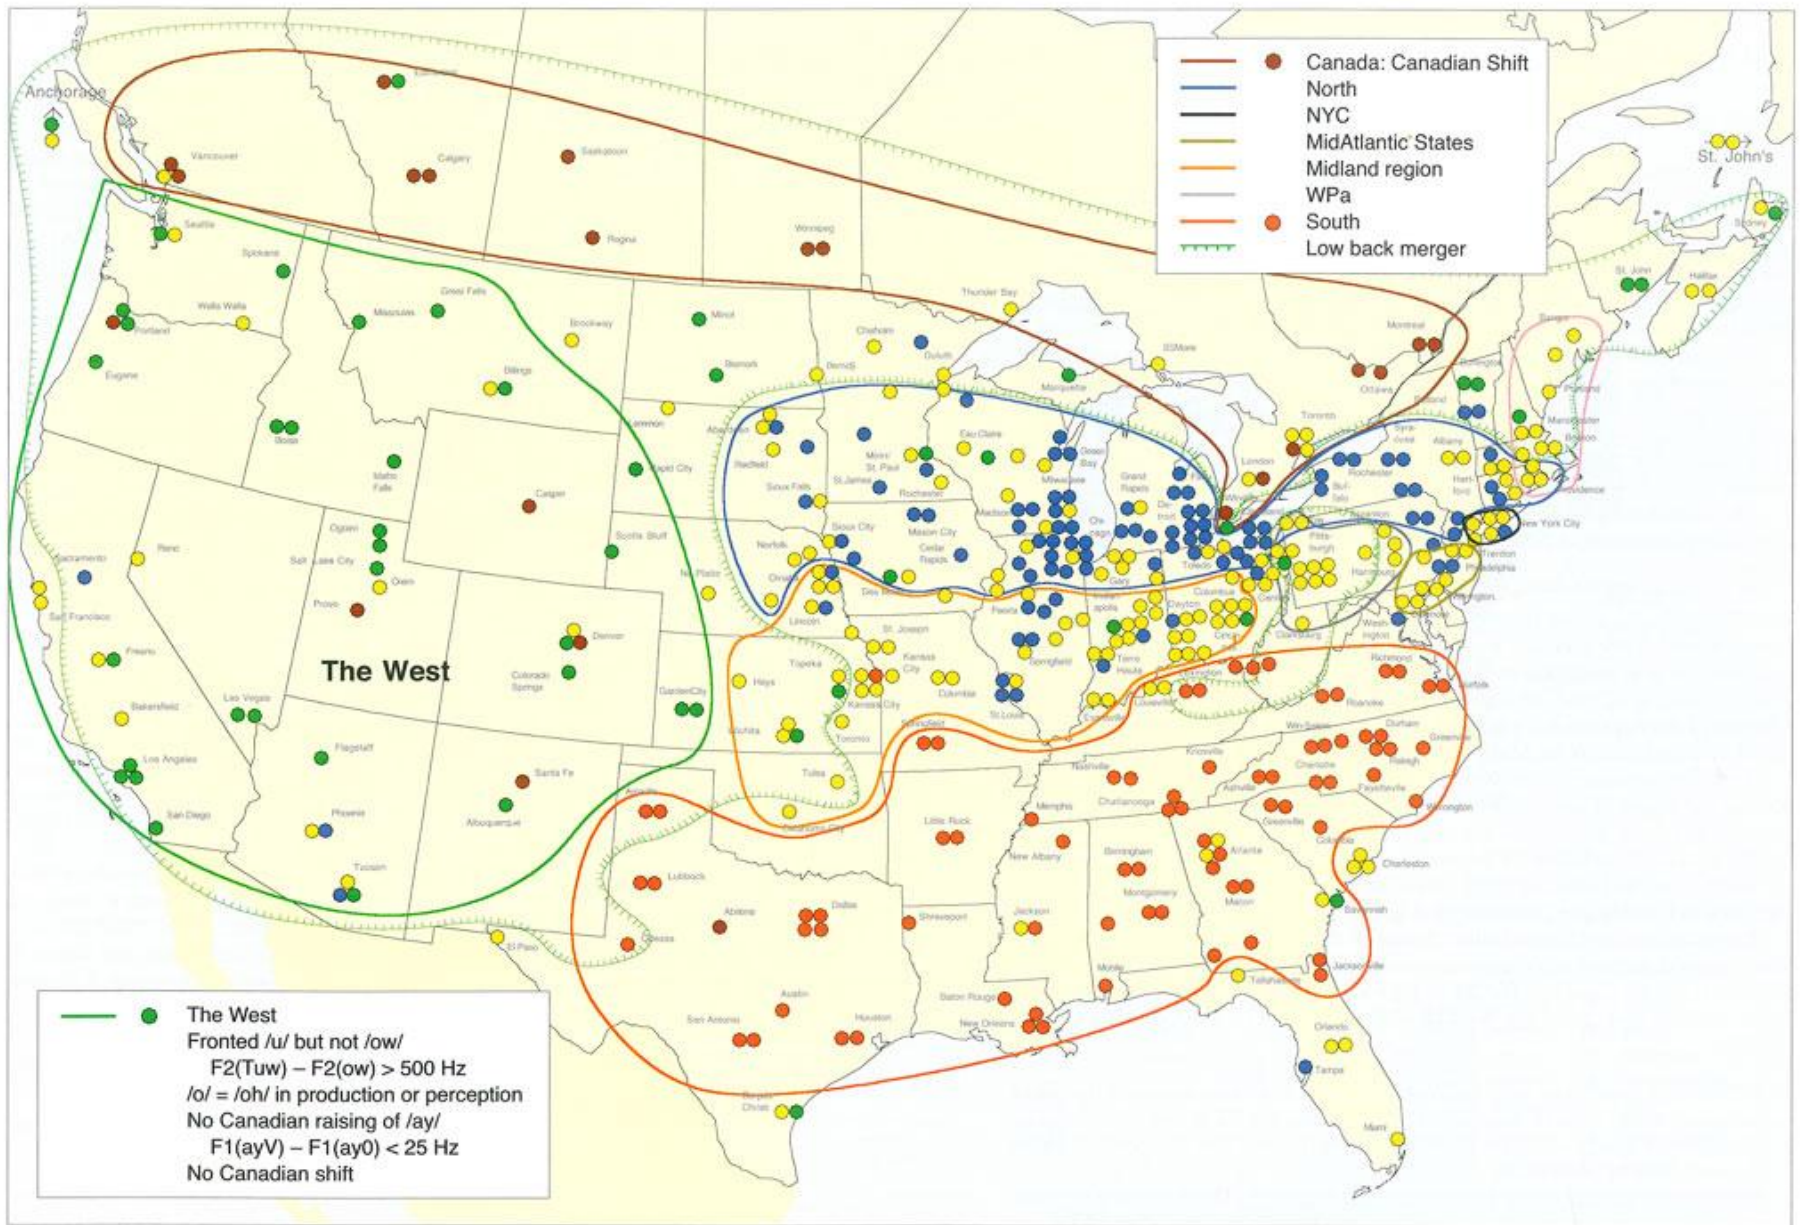

- **Britain (2004)** suggests that understanding space as an extralinguistic variable is an important direction for the future of sociolinguistics:
 - “Critical sensitivity to the socialized nature of human space(s) is required if we are to advance the discipline further” (45).
- This study aims to explore perceptions of geographic linguistic differentiation

Introduction-English in WA

- Little is known about the English spoken in Washington State
 - especially in comparison to what is known about English in other regions of the United States

Introduction-English in WA

- Labov, Ash and Boberg (2006)
 - Atlas of North American English (ANAE)
 - Includes 16 speakers from the PNW (UT, ID, WA, OR)
 - “considerable mixing of language patterns” (136)
 - Heterogeny without structure
 - Distinguishing features of ‘the west’:
 - low back merger
 - uw- fronting without presence of ow-fronting

Introduction-English in WA

Although some other production patterns emerging:

- Wassink, Squizzero, Scanlon, Schirra & Conn (2009)
 - Seattle
 - (eyg) and (eg) have merged ('egg' rhymes with 'bacon')
 - raising and fronting of pre-velar /æ/ BAG
 - (æ) proximal to (ɛ) ('bag' sounds like 'beg')
 - Mainly younger females

Introduction

perceptions of English in WA

- No perceptual/attitudinal research on the English spoken in WA
 - Oregon (OR) Hartley (1999)
 - OR residents perceptions of whole of US
 - Consistent with previous research on perceptions of the English spoken in the US
 - OR residents linguistically secure—they rated OR English as the most correct and pleasant

Introduction-English in WA

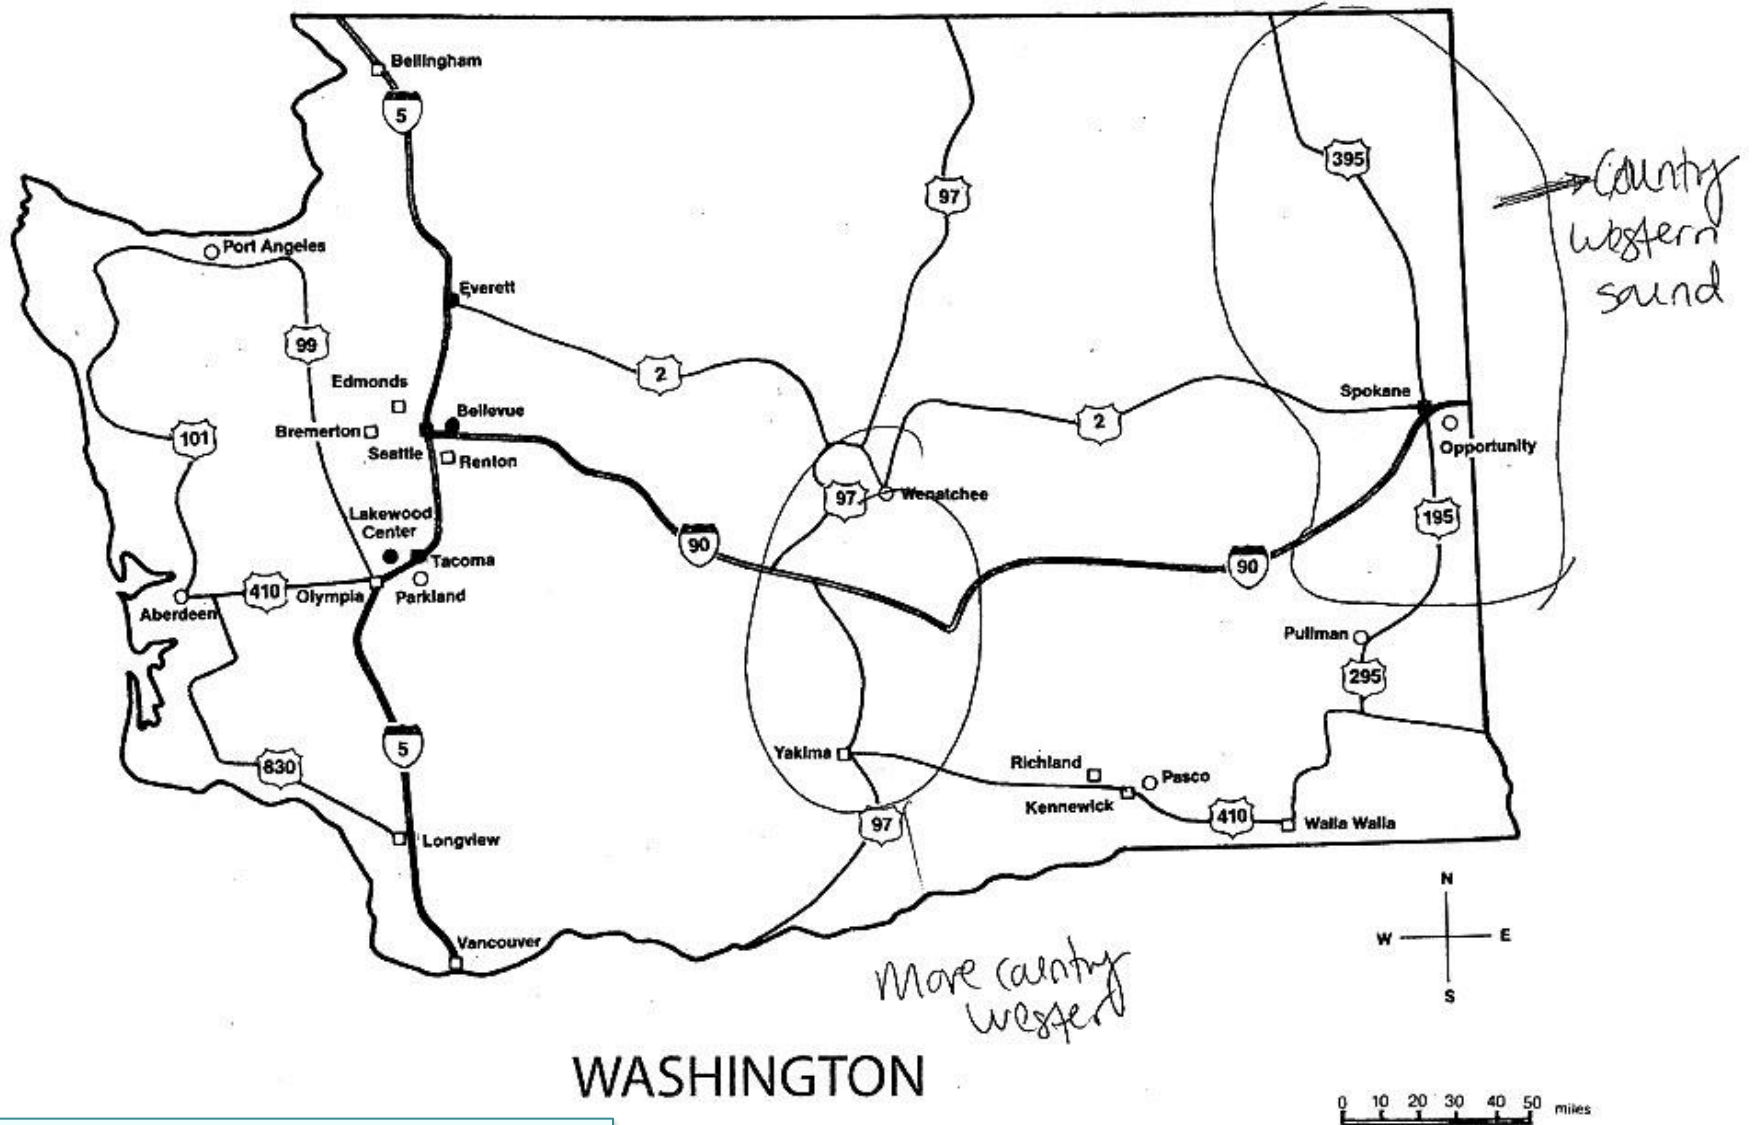

- We need more information on English in WA
- Perceptual research
 - Is part of a complete description of a communities' language use includes the perceptions of the speakers
 - Thus exploring perceptions of the English spoken in the state by long-time residents of WA helps fill in gaps about what we know about the English in WA

Methods

Maps

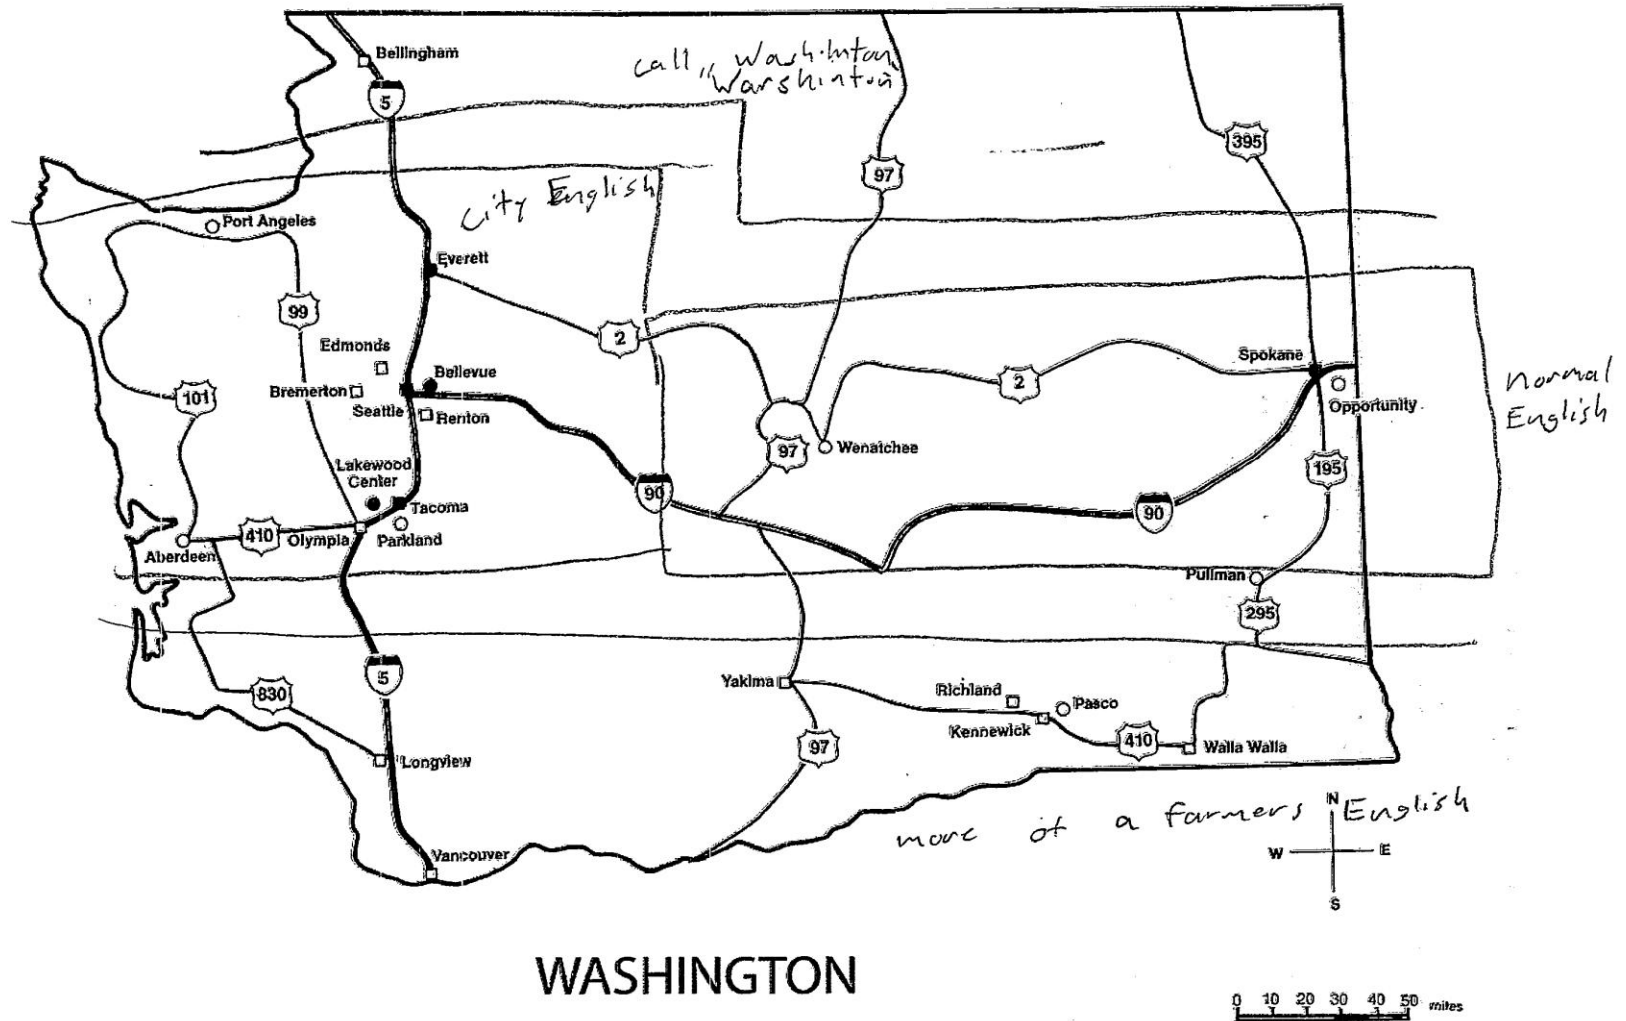

- Respondents were asked to indicate on the map places in the state where they think people's English sounds different and to give a label for that variety (Preston and Howe 1987)

2. Please draw a line around places where you think people's English sounds different.
3. Next, write down what you'd call that way of talking, if you can think of a label for it. Give an example of what's different there (is it a word or pronunciation they use? Or a special way of talking?).

38 year old female, Seattle

2. Please draw a line around places where you think people's English sounds different.
3. Next, write down what you'd call that way of talking, if you can think of a label for it. Give an example of what's different there (is it a word or pronunciation they use? Or a special way of talking?).

Methods

- 229 respondents
 - Long-term residents of WA from all over the state
 - Snowball sampling among higher education institutions resulted in large groups of respondents from Seattle, Bellingham, Olympia and Wenatchee
 - 95 females, 83 males
 - Average age is 26 (respondents were over 18 years old)

Methods

- 178 respondents' maps were 'georeferenced'
 - 51 maps had no drawing on them
 - 27 had no polygons but did have comments (e.g. "hear no difference")
 - 24 had no polygons or comments

Methods

Georeferencing procedures

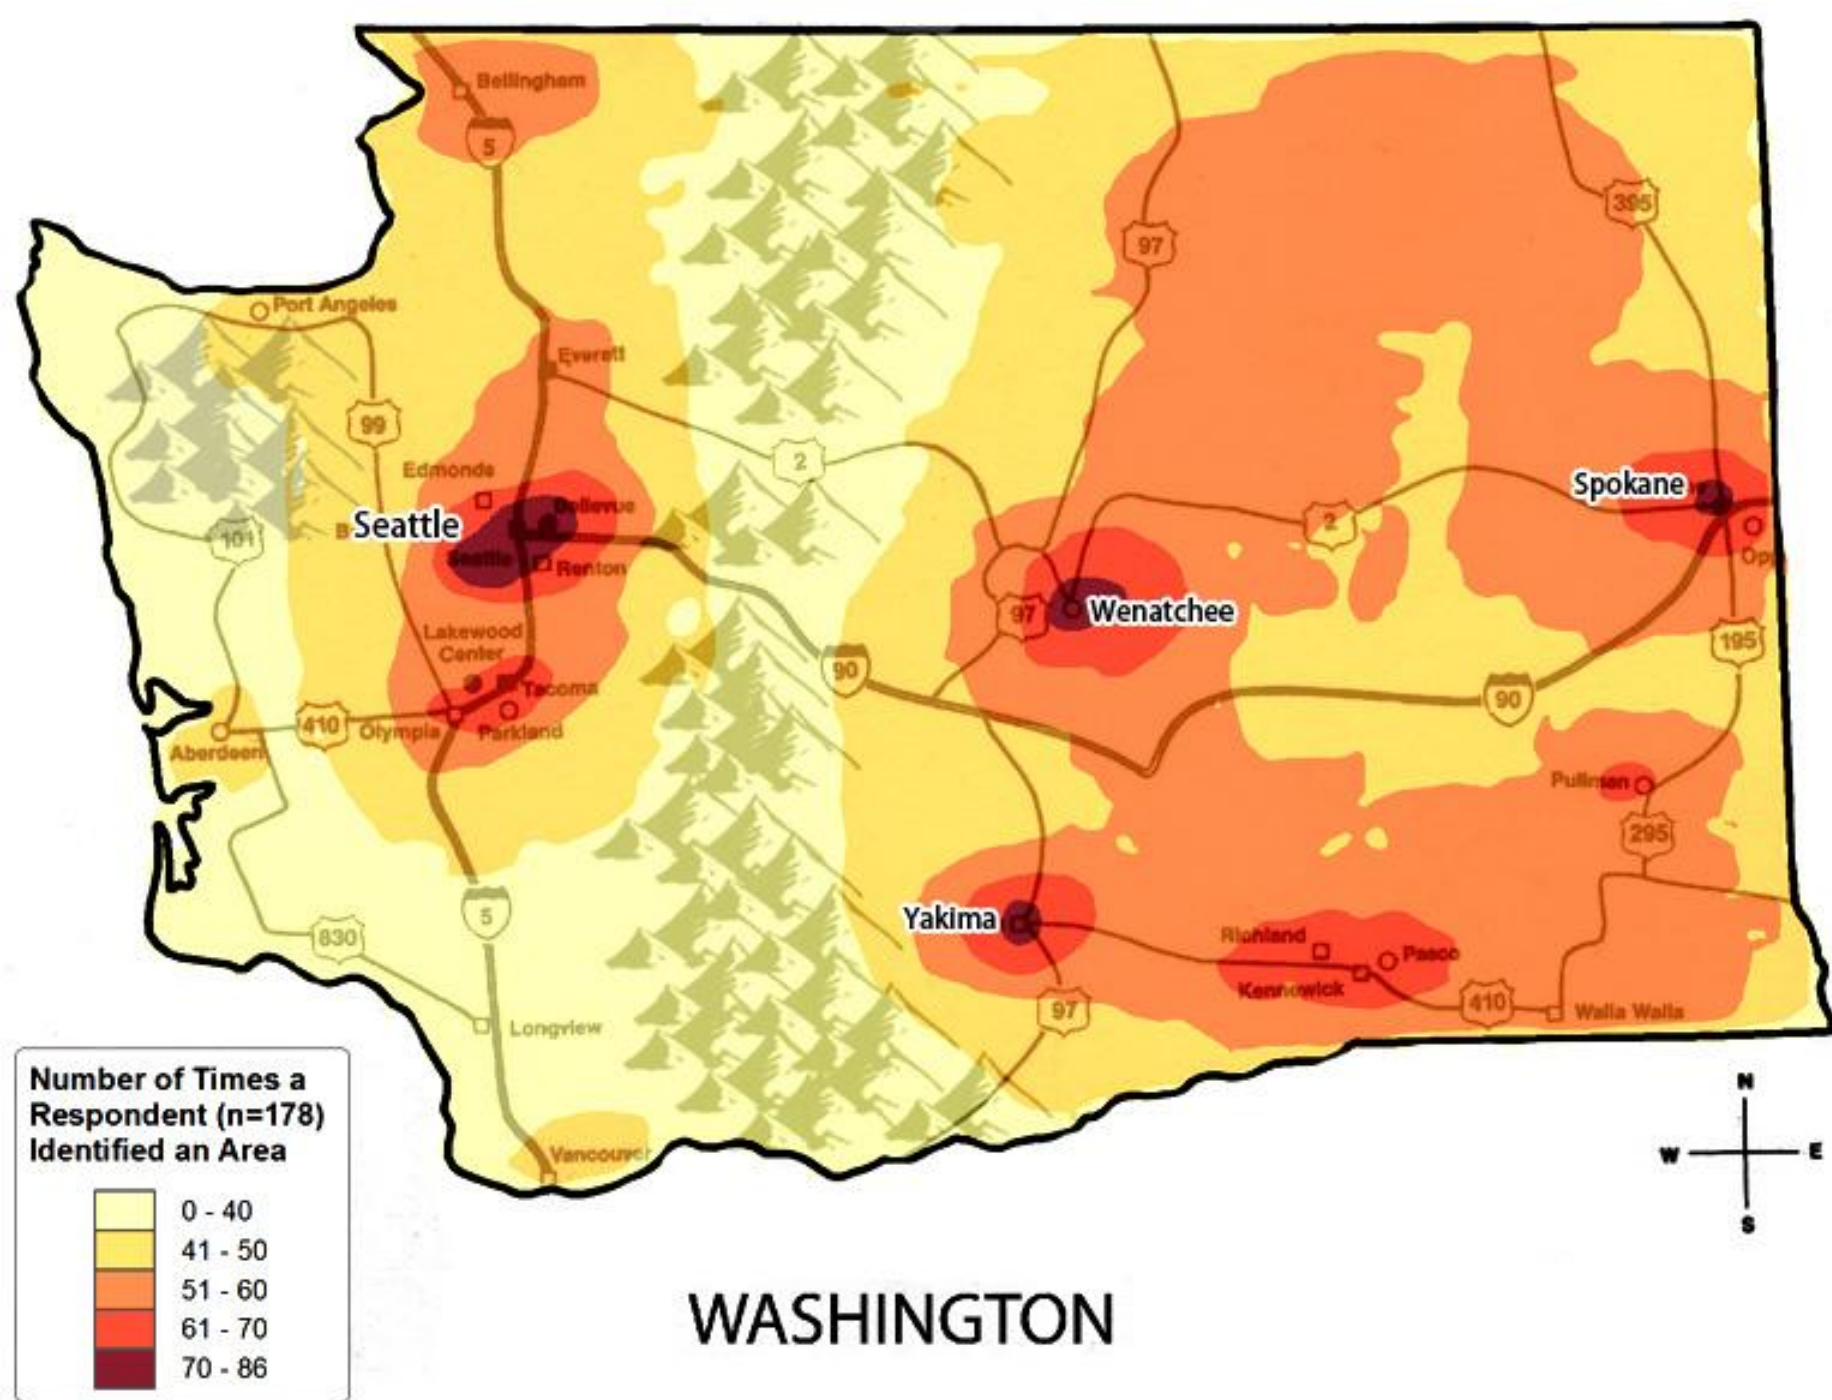

- Each map was scanned and saved as a .pdf file so that it could be read by ArcGIS.
 - ArcGIS 9.0 Geographic Information System software
 - This software allows the respondent maps to be aggregated
- Hand-drawn lines on each map were ‘traced’ resulting in a map ‘layer’ of polygons
 - Thus each shape that a respondent drew on their map is represented by a single polygon (resulting in 463 polygons)
 - Polygons were coded according to the label given to them by a respondent allowing for the creation of maps of qualitative themes that emerge from the data
 - 301 polygons (of a total 463) had a label associated with them

Methods

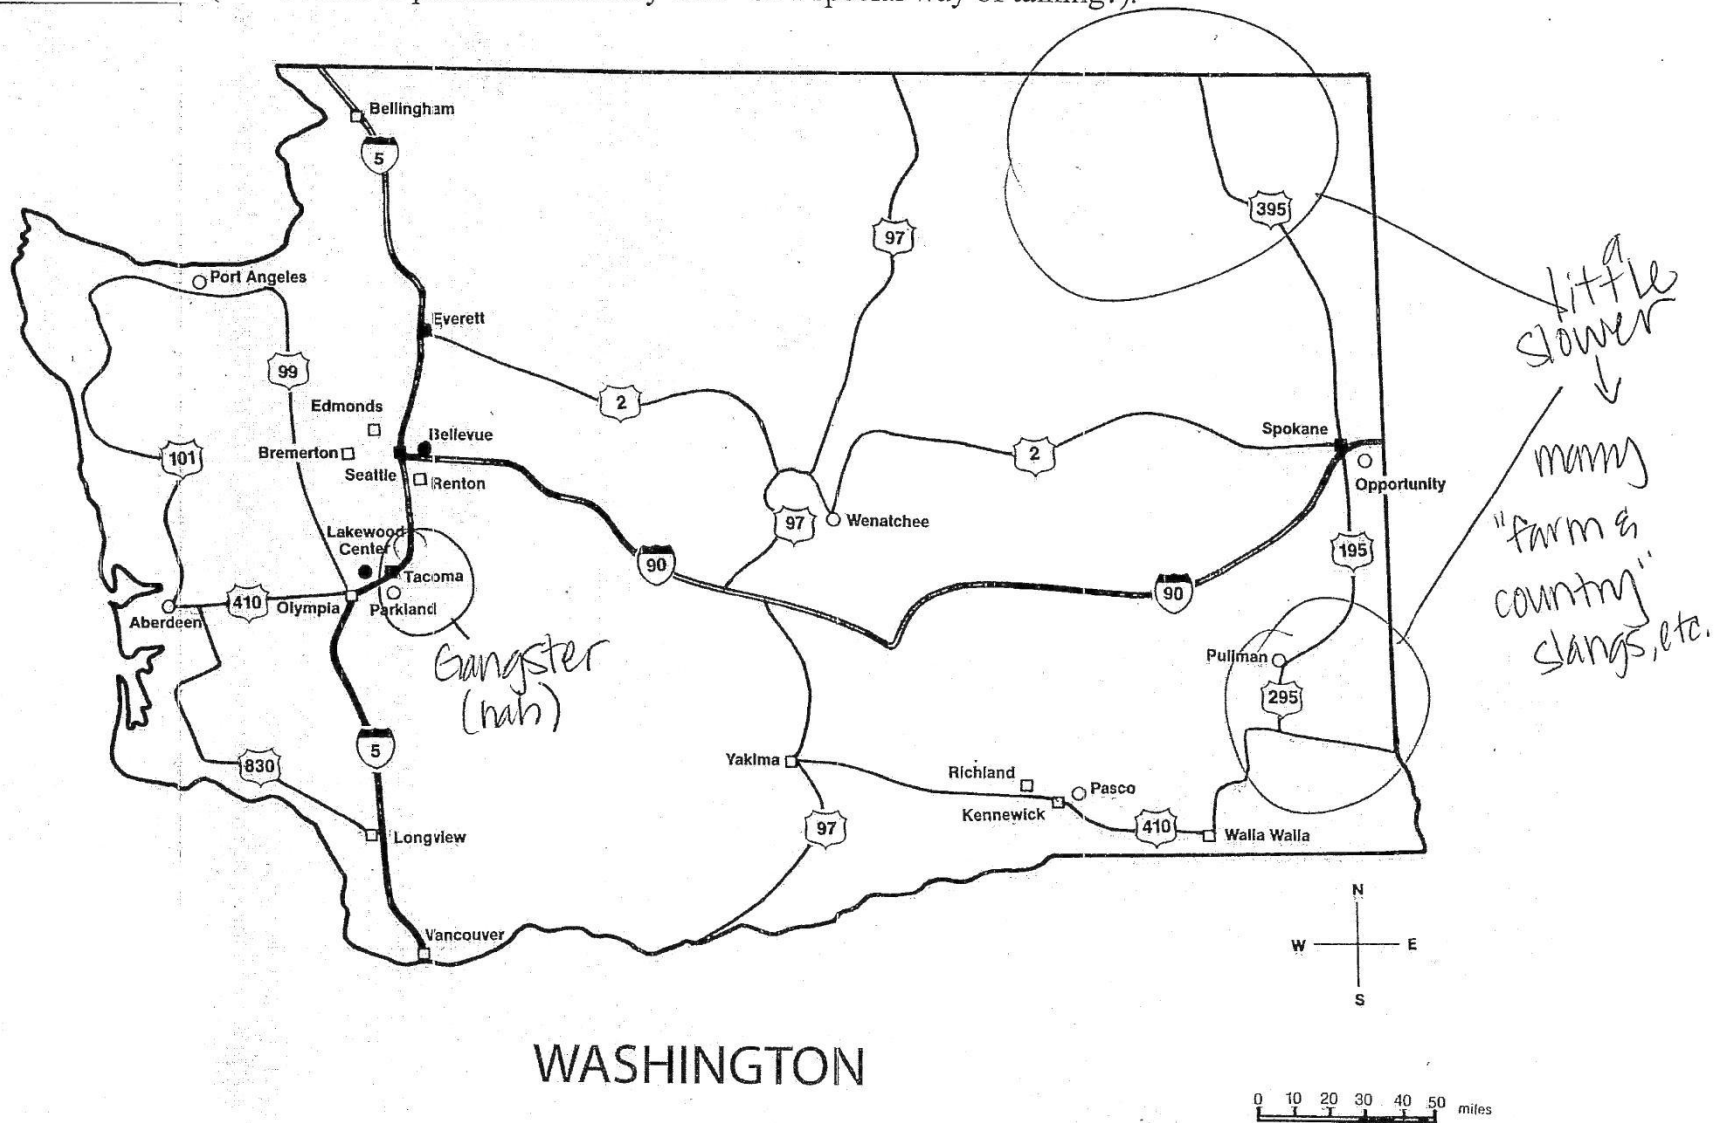

- Each of these map layers of polygons were combined to create a composite map consisting of all the respondents' maps
- This procedure 'translates' individual maps into a composite representation showing the intersections among respondents ideas of differentiation in the state

Results—composite map

- Composite map of all respondents
 - Urban areas salient
 - Eastern/western divide

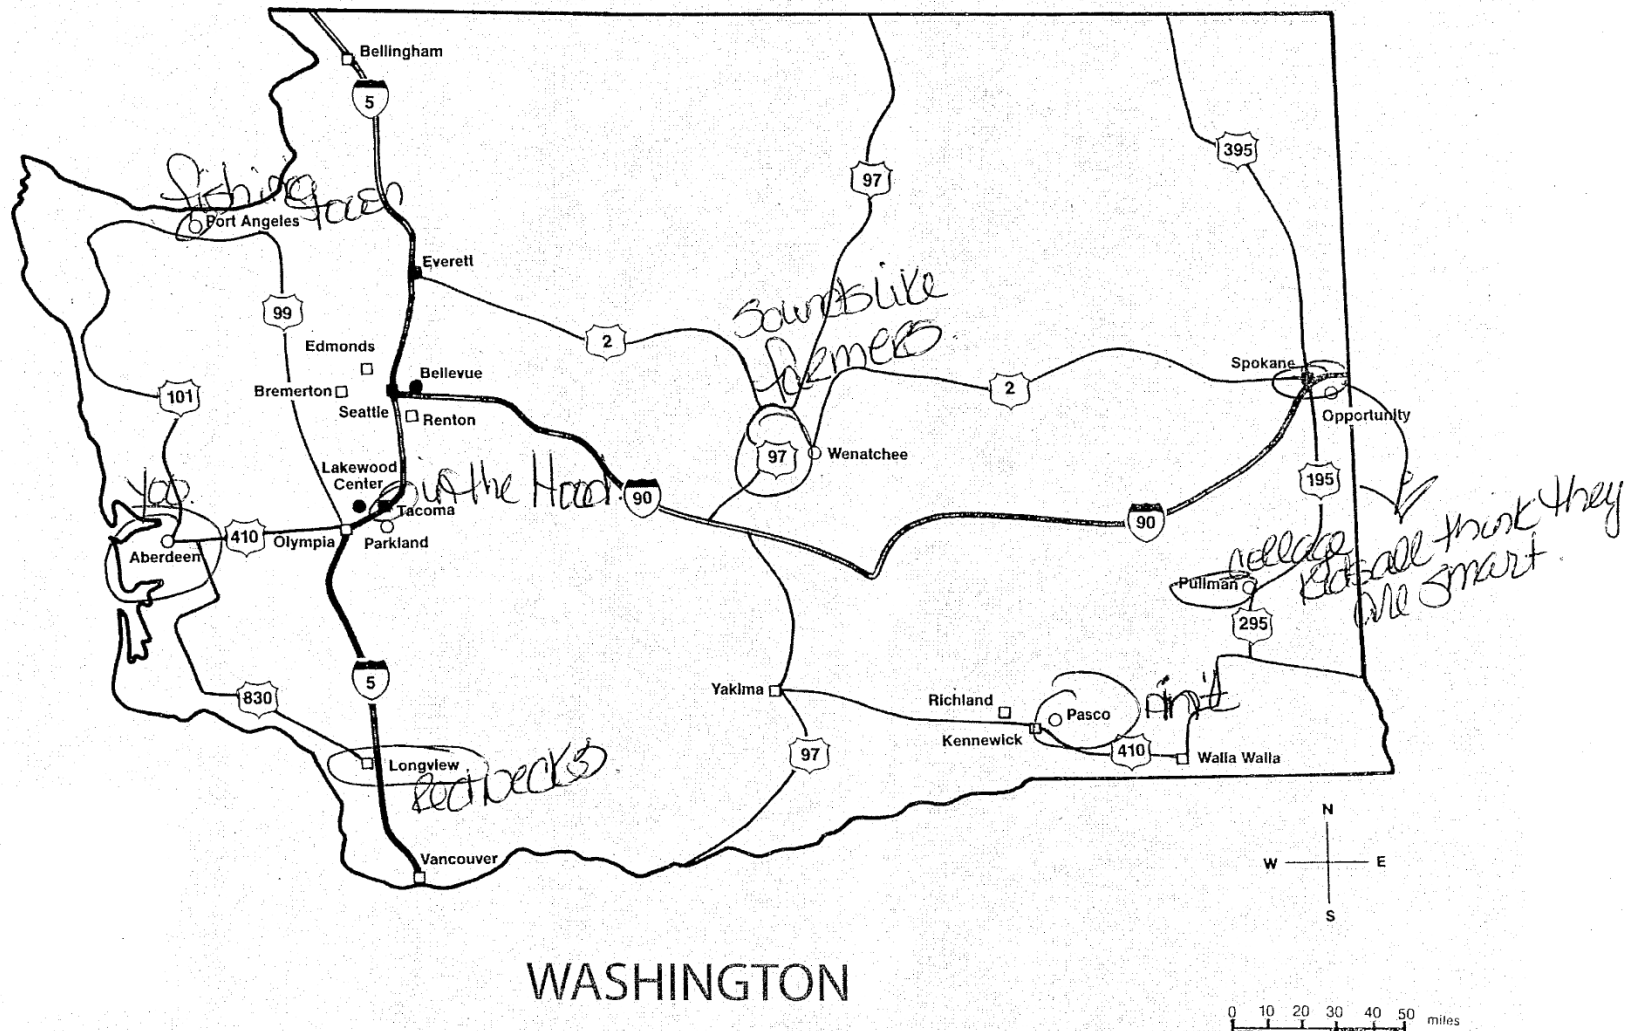

2. Please draw a line around places where you think people's English sounds different.
3. Next, write down what you'd call that way of talking, if you can think of a label for it. Give an example of what's different there (is it a word or pronunciation they use? Or a special way of talking?).

23 year old female, Wenatchee

- Please draw a line around places where you think people's English sounds different.
- Next, write down what you'd call that way of talking, if you can think of a label for it. Give an example of what's different there (is it a word or pronunciation they use? Or a special way of talking?).

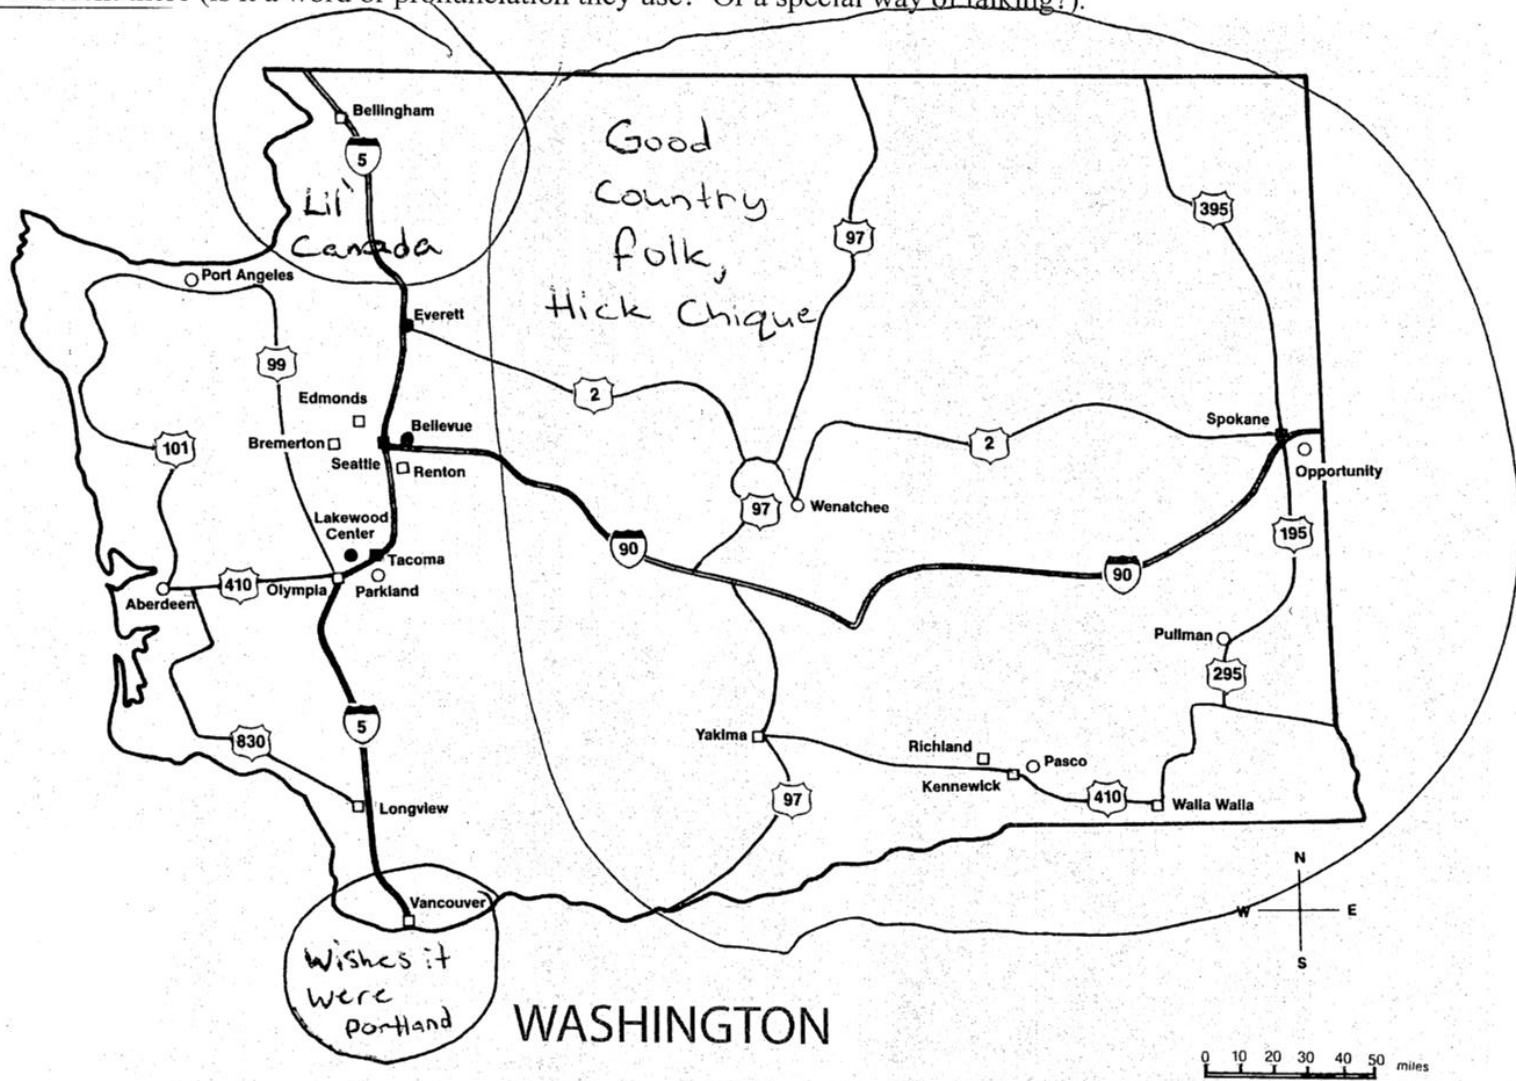

WASHINGTON

Results—labels given

- Polygons were coded according to the label given
Most frequent labels associated with polygons:

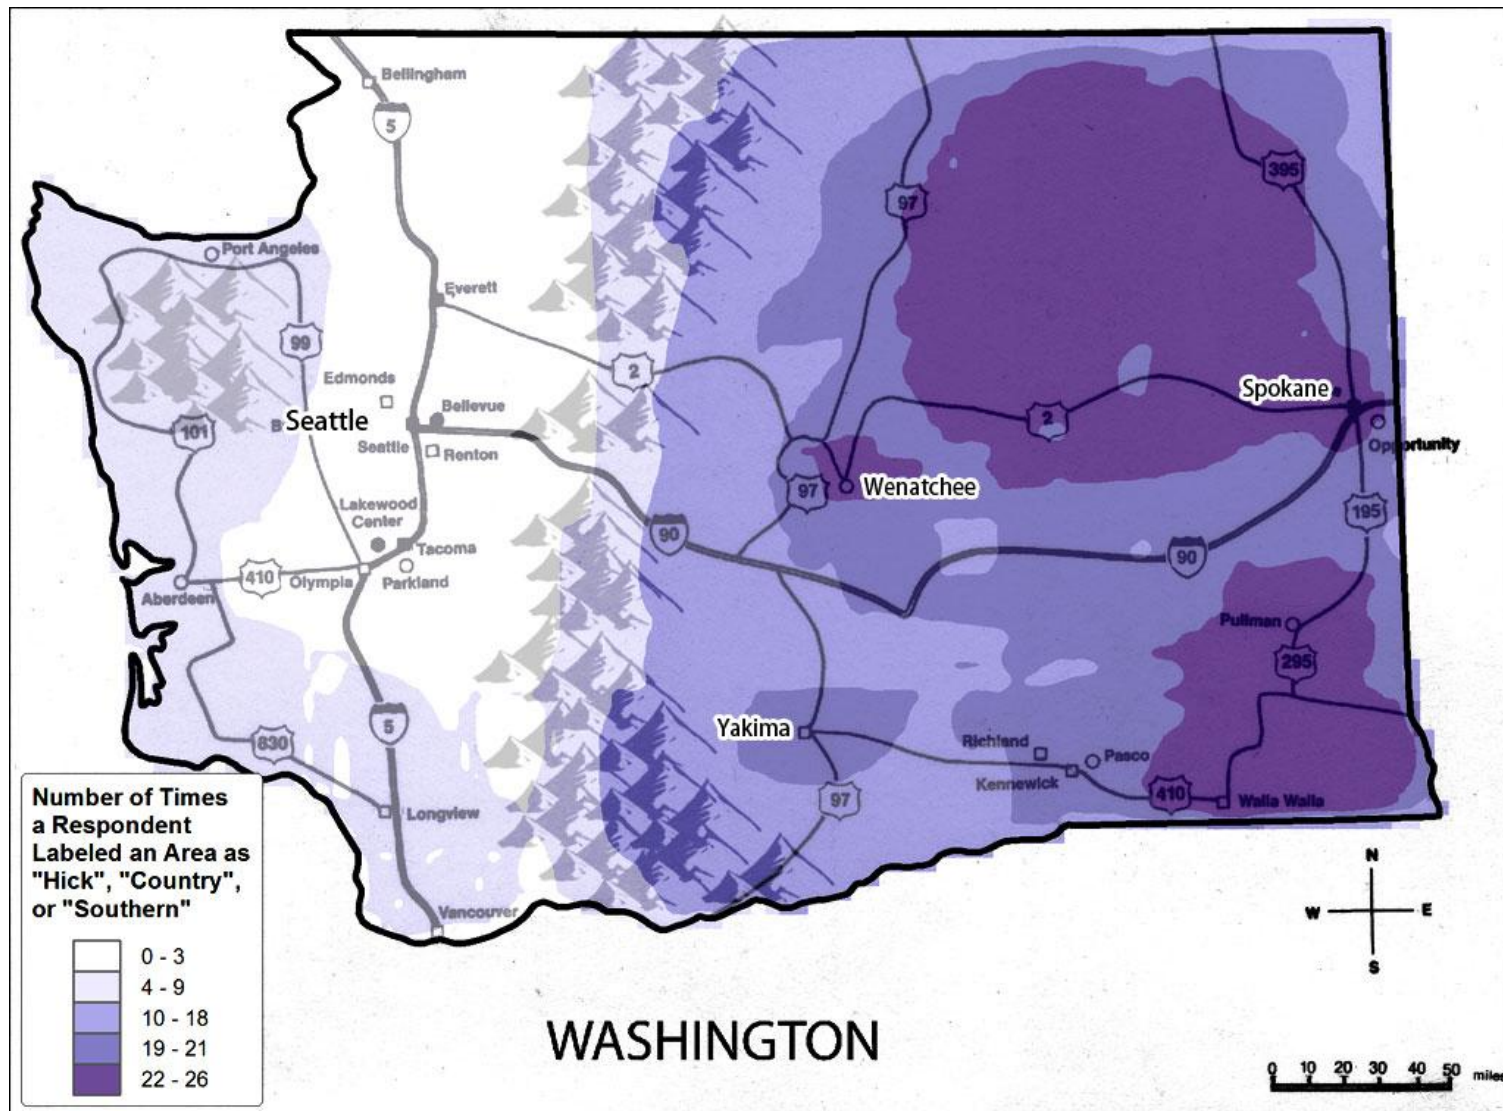

Category	Number	examples
Hick/Country/ Southern	86	“rednecks”, “farmers”
Spanish	40	“Spanglish”, “spanish influence”
Slang	24	“a lot of slang”
Pronunciation	24	“warshington”, “word pronunciation”
Variation	14	“variety”, “blend”

2. Please draw a line around places where you think people's English sounds different.
3. Next, write down what you'd call that way of talking, if you can think of a label for it. Give an example of what's different there (is it a word or pronunciation they use? Or a special way of talking?).

“Hick”/“Country”/ “Southern”

Composite map of all polygons labeled “Hick”/“Country”/ “Southern”

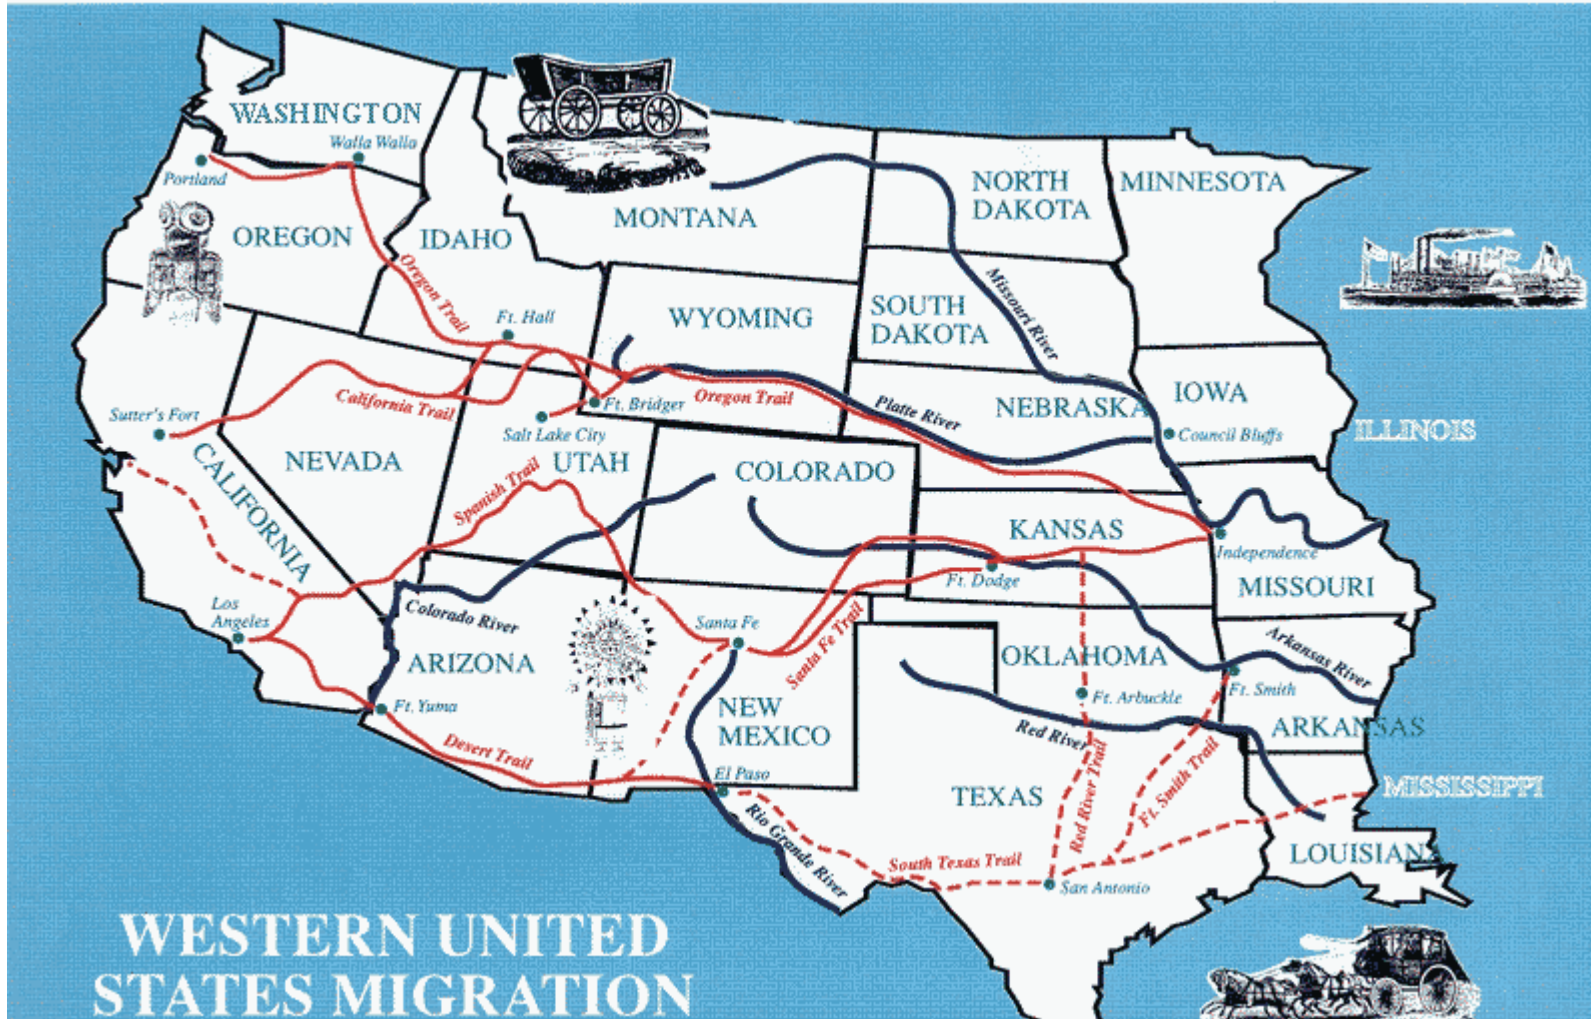

“Hick”/“Country”/ “Southern”

- Salience of eastern WA and “Hick”/“Country”/ “Southern”
 - Linguistic differences
 - Geographic differences
 - Socio-cultural differences

Salience of “Hick”/“Country”/ “Southern”--linguistic

- Anecdotal attestation of
 - Tensing of lax vowels before voiced fricatives
 - ‘innovative’, ‘pleasure’
- ‘intrusive r’ (‘Warshington’)
 - Noted by Reed (1952)
 - Anecdotal evidence from respondents in this study and others

Salience of “Hick”/“Country”/ “Southern”--linguistic

Salience of “Hick”/“Country”/ “Southern” -- geography

- “Cascade curtain”
 - “Although the Cascade range geographically divides our state, we must strive to eliminate the symbolic barrier the mountains have presented”
 - Former Seattle Mayor Greg Nickels in 2002 to the Spokane newspaper *The Spokesman-Review*

“Cascade curtain”

Western WA

Eastern WA

Salience of “Hick”/”Country”/ “Southern”—socio-political

Agriculture—A Cornerstone of Washington's Economy

Key economic facts on Washington Agriculture:

Washington's farmers and ranchers produced crops and livestock valued at \$7.7 billion in 2008.

The top 10 commodities, in millions of dollars, were:

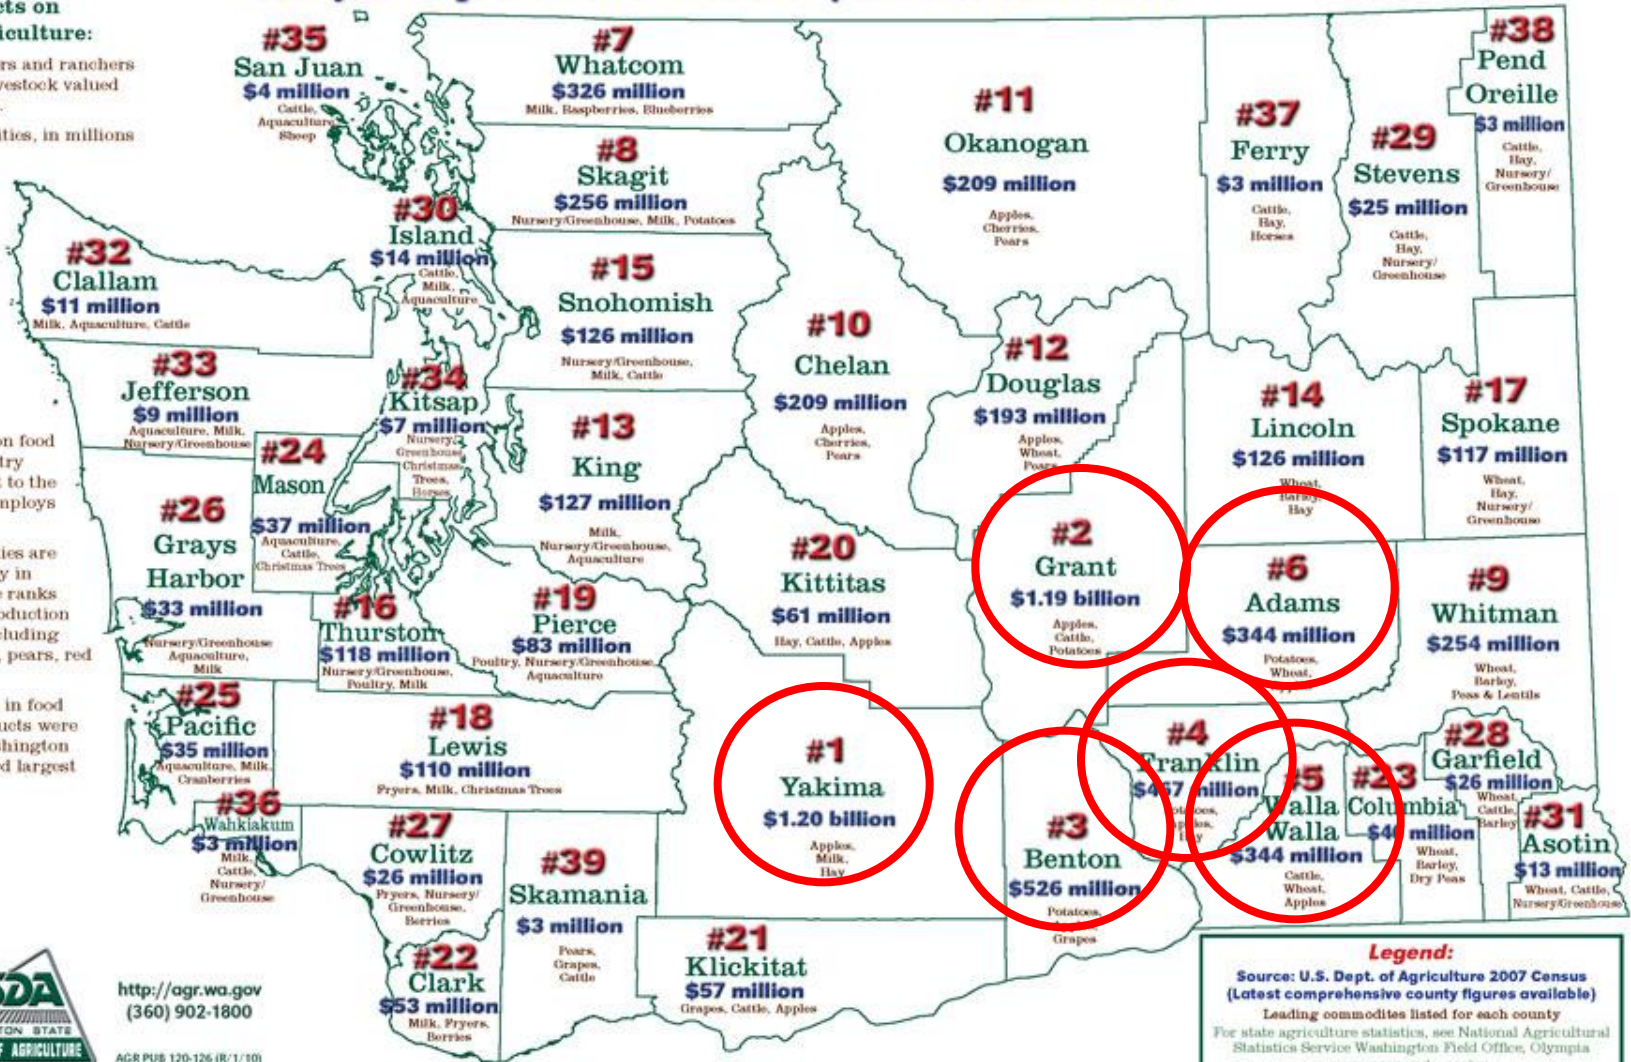

Apples.....\$1,283
Milk.....\$1,002
Wheat.....\$745
Potatoes.....\$693
Hay.....\$588
Cattle.....\$496
Nursery/
Greenhouse...\$321
Cherries.....\$297
Hops.....\$253
Grapes.....\$201

The state's \$38 billion food and agriculture industry contributes 12 percent to the state's economy and employs 160,000 people.

Some 300 commodities are produced commercially in Washington. The state ranks first in the U.S. for production of 10 commodities, including apples, sweet cherries, pears, red raspberries and hops.

Nearly \$14.8 billion in food and agricultural products were exported through Washington ports in 2008, the third largest total in the U.S.

County Rankings and Market Value of Crop and Livestock Products

Salience of “Hick”/”Country”/ “Southern”—socio-political

Salience of “Hick”/”Country”/ “Southern”—socio-political

- Cultivating the aura of “country”
 - [Toppenish](#), WA Chamber of Commerce: “We're the BEST OF THE WEST!”

Salience of “Hick”/”Country”/ “Southern”—socio-political

Cultivating the aura of “country”

- Omak, WA

Conclusion

- Eastern/western, urban/rural differences were among the most salient ‘differences’
 - Eastern Washington was labeled as “hick”/ “country”
 - The “hick”/ “country” label could be attributed to
 - » Linguistic differences
 - » Geographic differences
 - » Socio-political differences

Conclusion

- More to explore
 - Salient linguistic features such as
 - Correspondence with production facts
 - Awareness of ‘Bag/beg’ merger before voiced velar
 - Midlands features of eastern WA?
 - Salient socio-political categories such as
 - Spanish, slang, pronunciation, variation

Conclusion

- Britain (2004:45)

“Critical sensitivity to the socialized nature of human space(s) is required if we are to advance the discipline [of sociolinguistics] further”
- We need to better understand the links between a community’s sensitivity to geographic, socio-cultural, and socio-political differentiation and the emergence of linguistic differentiation
