Emerging and Re-emerging Infectious Diseases:
The Perpetual Challenge

Thursday • April 28th • 2005

Hogness Auditorium • Health Sciences Building • 4:00 p.m.
A reception is to follow in the Health Sciences Lobby

Dr. Fauci is the Director of the NIAID, where he oversees an extensive research portfolio of basic and applied research to prevent, diagnose, and treat infectious and immune-mediated illnesses, including HIV/AIDS and other sexually transmitted diseases, illness from potential agents of bioterrorism, tuberculosis, malaria, autoimmune disorders, asthma and allergies.

He has been instrumental in developing strategies for the therapy and immune reconstitution of patients with these serious diseases, as well as for a vaccine to prevent HIV infection. He continues to devote much of his research time to identifying the nature of the immunopathogenic mechanisms of HIV infection and the scope of the body’s immune responses to the AIDS retrovirus.

No registration is required. This lecture is open to all Faculty, Staff and Students. For more information contact Vee White at veewhite@u.washington.edu. To request disability accommodations contact the DSO office at dso@u.washington.edu or (206) 543-6450.
