

POSITION: SENIOR FELLOW, MAIZELS LABORATORY, DEPARTMENT OF IMMUNOLOGY

Our laboratory studies how immunoglobulin genes undergo diversification in sequence and structure to produce high affinity antibodies. Current projects focus on understanding the molecular mechanisms that contribute to Ig gene diversification, and on harnessing these mechanisms to produce high affinity antibodies in cultured cells. A postdoctoral position is available immediately for a highly motivated scientist with a Ph.D., M.D., or equivalent degree. Position will remain open until filled. Send curriculum vitae and the names and email addresses of three references to:
