**Background and Goal Statement:**

Please provide us with a one-page description about your background and goals for the MCH Certificate Program that answers the following questions:

- Why have you chosen to work in and study maternal and child health? What issues, individuals, or communities in the US interest you?
- Describe your experience with programs, policies, or research affecting women, children, youth, or families. Be specific.
- What leadership roles have you assumed in your educational or job setting(s)? Give examples of how your professionalism and skills in communicating, critical thinking, and decision-making helped you to improve the health of women, children, youth, or families.
- How do you envision your professional role in US maternal and child public health five years after graduating? How will a MPH degree help you achieve this professional goal?
