

NURS 548: Frameworks in Infant Mental Health

ABOUT THE COURSE

NURS 548 Frameworks in Infant Mental Health provides a survey of the interdisciplinary field of infant and early childhood mental health (IECMH), with emphases on infant and early childhood development, including prenatal and neonatal factors, social/cultural/economic/societal influences, and treatment approaches to support healthy caregiver-child relationships.

This course provides background in how risk and protective factors can impact social-emotional, physical, and cognitive growth. Students will learn to integrate relationship-based principles and approaches to supporting families and other caregivers of young children and will use reflection to deepen their learning of IECMH principles and practices.
