CAVEAT STATEMENTS**2011**

1. We don't show entering undergrads by discipline. We don't do many direct admits to majors, so that doesn't apply to us. 2. The issue of distinguishing students entering at the Masters vs Doctoral level is a bit problematic. Students are admitted into a program that is expected to lead to a doctoral degree, but they may leave with a masters degree. Moreover, it depends on the department whether such a student is coded as a predoctoral student on entry, as a masters student until they get receive a masters degree, etc. So we've decided that the most accurate thing to do is to classify any student entering a program where they may receive a doctoral degree to be a doctoral student. We believe the only other approach open to me severely understates the number of entering doctoral students we have. 3. You'll see that I haven't (we can't do it well) broken out institutional income by discipline. 4. Research Income is a bit difficult for us, given our information systems. We are better able to report research expenditures. This information is based on award information, and so the year-to-year changes are a bit more volatile than if we were reporting on expenditures.

2012

1. Some students have multiple majors and may earn degrees in multiple fields. For the purposes of reporting student FTE and degrees awarded by subcategory, we classify students according to their first listed major (the order in which a student's majors are listed in our database is not consistent and does not signify any "ranking" among majors). This avoids double-counting students and degrees across subcategories. However, it should be noted that we have placed each multiple-major student into only one subcategory, so that both student FTE and number of degrees awarded will somewhat understate the number of students in a given subcategory. 2. We list research centers and institutes organized by school or college. Some centers and institutes are jointly owned by more than one school or college; we list these organizations under each of their parent divisions.
