HOME

GOALS

The goals of this educational activity are to:

- Increase the knowledge of health care providers, especially pediatricians, about the special susceptibilities of children to pesticides, particularly organophosphate pesticides
- Increase competency to recognize and respond to childhood pesticide-related illness.

OBJECTIVES

After completing this educational activity, the reader should be able to:

- Identify the routes and patterns of exposure that place children at risk for higher dose exposure to pesticides.
- Discern the importance of taking an environmental exposure history for timely diagnosis of childhood illness due to pesticides.
- Recognize the signs and symptoms of acute organophosphate poisoning in children, with attention to how presentation may differ from that seen in adults.
- Describe the public health importance of sentinel event reporting of pesticide-related illnesses, and know how to report such events.
- Understand the current evidence for long-term sequelae of acute and chronic organophosphate exposures during childhood.
- Provide anticipatory guidance that enables patients to limit childhood pesticide exposures.

ACCREDITATION

The University of Washington School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

The University of Washington School of Medicine designates this educational activity for a maximum of 2 AMA PRA Category 1 Credits™. Physicians should
only claim credit commensurate with the extent of their participation in the activity.

Release date: Nov 1, 2006  Expiration date: October 31, 2008

This self-paced, 2 unit continuing medical education (CME) course should take ~2 hours to complete. There is a $20 processing fee to receive CME credit.

To view course content without taking the course for credit, use the navigation menu on the upper left of this screen.

To get started on the CME course, please go to the instructions page.

All faculty and authors have indicated they have no commercial affiliations or relationships to disclose.
ACKNOWLEDGEMENTS

This curriculum was developed by the Pacific Northwest Agricultural Safety and Health (PNASH) Center and the Pediatric Environmental Health Specialty Unit (PEHSU) in Seattle, Washington.

PNASH: The Pacific Northwest Agricultural Safety and Health (PNASH) Center conducts research and develops best practices to prevent occupational disease and injury among agricultural operators, workers, and their families in the Northwest.

PEHSU: The PEHSU Program is funded by the Agency for Toxic Substances and Disease Registry (ATSDR Cooperative Agreement U50/ATU374312) and the U.S. Environmental Protection Agency.

Supported by:

1. Washington State Medical Aid and Accident Funds, administered through the University of Washington Department of Environmental and Occupational Health Sciences.
2. Cooperative Agreement #5 U50 OH07544 from the National Institute for Occupational Safety and Health/Centers for Disease Control and Prevention (NIOSH/CDC). Its contents are solely the responsibility of the authors and do not necessarily represent the official views of NIOSH/CDC.
