Prepare a few page summary of the status of your project. Include:

- A brief statement of the project. From a mathematical perspective, what needs to be solved?

- A discussion of warm-up problems, if relevant.

- Your plan of attack. What are possibly reasonable strategies? What are the key decisions which need to be made? Which decisions have been made (and why)?

- Where are you in this process? Where will you be in, say, three weeks?
