April 2000

Dear Families,

Phenyl-Free 2 has arrived!

We are excited about this new medical food (formula) product. Preliminary reports suggest that Phenyl-Free 2 tastes better, smells great, looks more like regular milk, and is easier to prepare than the current Phenyl-Free!

We are anticipating no problems in your changing to the new formula. However, we are suggesting that you approach the transition in a step-wise fashion. An appointment with the PKU Clinic, on a normal clinic day or an individually scheduled appointment will be a prerequisite to develop your individual plan before starting the transition. Once the orientation session has been completed, Phenyl-Free 2 will be shipped to you from the State Department of Health, Newborn Screening Office. Production of the current Phenyl-Free formula will be phased out by the end of the year, so we encourage you to plan for this transition process soon.

Please call the PKU Clinic if you have any questions or concerns regarding this transition to the new, improved Phenyl-Free 2 formula.

Sincerely,
The PKU Clinic Team
