

New Course for Winter 2013!

Public Health Genomics: Introduction to Genomic Epidemiology

Does your genome = your destiny? How big of a role does the environment play?

What is Direct to Consumer Genetic testing?

Family history-does it matter? How does family health history influence your future health?

Can a genetic test determine your “best diet”?

PHG 301: SLN 18039 (3 credits)

MW 3:30 – 4:50

NO PREREQUISITES

Meets Individuals & Society or Natural World Requirements

Course Description:

In this course we'll talk about how we identify genetic and environmental factors that are associated with disease, and how this information can be used in public health and clinical practice. We will touch on the ethical, societal, political and legal dimensions that can arise when using information on genetic and environmental factors in research and practice.
