

Cool Jobs Series: Green & Clean Technology

Wednesday, June 12 | 5:30 – 7:30 pm
Seattle Public Library's Central Library Auditorium
1000 Fourth Avenue, Seattle 98104

Event is FREE, but registration is required at seattlesciencefestival@pacsci.org

Learn first-hand from experts and innovators in this booming field!

Brad Roberts works with Intellectual Ventures' Invention Development Fund on clean energy innovations. He is also on the Materials and Lifecycle Management team and will speak about the journey of green chemistry technologies from lab to market.

Jim Thomson studies ocean energy, surface gravity waves and coastal processes by combining field observations and remote sensing techniques. His research takes him to the Arctic Ocean, southern Chile and the high seas in the North Pacific.

Elizabeth Willmott is the Project Manager for the New Energy Cities program, working with cities to help meet their carbon reduction goals through innovative programs and focuses on carbon math. She co-authored "Powering the New Energy Future from the Ground Up", a report on clean energy innovations.

Moderator: **John Gardner** has been an entrepreneur, agricultural researcher, teacher, leader of community economic development, VP at Washington State University, and is currently the Dean of the Bainbridge Graduate Institute that offers an MBA in sustainability.
