

WATER BRIGADES

Socially Responsible Water Systems for Sustainable Communities.

Water Brigades design and implement water systems to prevent communicable illnesses in communities with limited access to clean water

Volunteers work side-by-side with community members to construct the water system and provide education to children and community members.

Make a tangible impact on quality and access to water in rural, under resourced communities in Honduras

Also involves volunteer conducted educational workshops for families—especially children—about conservation of water usage and consumption
