

The Project for Assessing New Genetic Exploration in Autism

PANGEA

Seeking Research Study Participants

The PANGEA study at the University of Washington Autism Center is looking for individuals of all ages who have been diagnosed with an Autism Spectrum Disorder to participate in a research study exploring genetic differences that may play a role in Autism Spectrum Disorders.

Study Description

The PANGEA study involves donating a small sample of saliva (~ 4 teaspoons) and a blood draw (~ 3 tablespoons) from the individual diagnosed with ASD and their biological parents and siblings, and answering some brief questions about background and family history.

Participation will take approximately 30 minutes. Participants will be compensated \$20 each for their participation.
