

# The ZEBRA Study:

Zeroing in on the Examination of Brain and Behavior Research in Autism

## Seeking Research Participants Ages 8-17

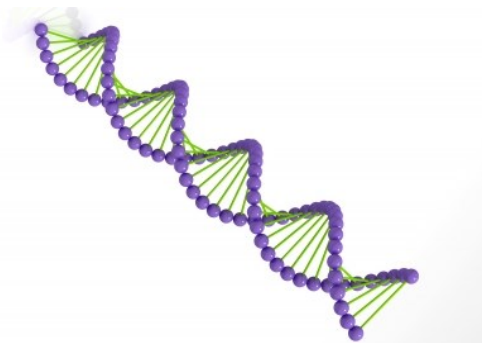

The University of Washington is looking for subjects to participate in a new study exploring how different genetic events impact behavior in children with an Autism Spectrum Disorder.

The study will involve two 4-hour visits to the University of Washington. Subjects will participate in a neurocognitive assessment, neurological exam, EEG, blood draw, and provide a detailed developmental history.

Expenses related to the study visits (meals, airfare and lodging) will be covered by the study and subjects will be reimbursed \$100 for their participation.

**If you are interested in learning more, please contact the study coordinator at (206) 616-2889.**
