

NEW Early Intervention Study

For infant siblings of children with ASD

This research project is evaluating a parent-mediated intervention for infants at familial risk for ASD. The intervention focuses on improving children's social-communication skills.

To be eligible for this study, you must:

- **Have a child with an ASD diagnosis**
- **Have an infant under 15 months old**
- **Live within 20 miles of UW**

- Families will be randomly assigned to either the Treatment group or an Assess-and-Monitor group
- Families in both groups will come to UW for 6 visits for an evaluation of their infant's social-communication skills
- Families in the Treatment group will receive in-home training 2 times per week for 12 consecutive weeks
