"Examining the Health Effects of In Utero and Early Life Exposure to Arsenic"

Dr. Molly Kile, ScD is an environmental epidemiologist whose research focuses on understanding how exposures to chemicals influence human health. She has experience conducting environmental health studies in communities that are disproportionately impacted by environmental contaminants. Specifically, she has conducted several population-based studies in arsenic-affected communities in Bangladesh for the last 11 years to investigate the health effects associated with chronic arsenic exposure. She also lead the Community Engagement Core of Oregon State University’s Superfund Research Program, which works in collaboration with Native American Tribes in the Pacific Northwest to investigate their environmental health concerns.

When: October 8th 12:30pm - 1:20pm

Where: T-435 HSB Magnuson Health Sciences Center
