Zoom Controls

MediaViewer Help [p.4]

Top Bar

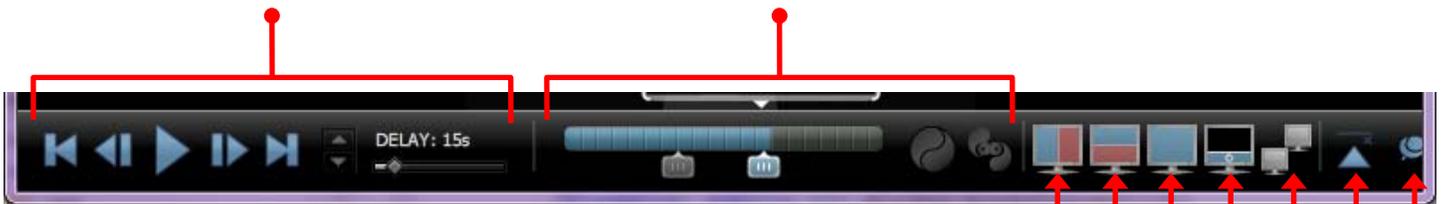

Application Bar

Navigation controls (see p. 6).

Progress bar (see p. 7).

Split display vertically.

Split display horizontally.

Undo split display.

Show/hide image.

Reveal secondary menu. Not available in Web mode.

Reveal secondary menu. Not available in Web mode.

Pin/unpin application bar. Pinned application bar will not auto-hide.

Application Bar > Navigation Controls

Click the up and down arrows to adjust the slide-transition delay. Indicates delay between slide transitions when slideshow is playing. Drag diamond to adjust delay.

Go to first image.

Go to previous image.

Go to next image.

Go to last image.

Play/stop slideshow. Delay timer will count down time until next slide transition. Play is disabled until all images are cached.

MediaViewer Help [p.7]

Application Bar > Progress Bar

Shows slide title and image as progress bar handle is dragged.

In split display mode, click to bind application bar to other display panel. Control colors will change to indicate which display panel has focus.

In split screen mode, click to navigate slideshow in image pairs. A pair consists of adjacent images. Navigation will move from pair to pair.

Divisions within progress bar correspond to number of slides in slideshow. Color indicates current location within the slideshow.

Drag progress bar handle back and forth to navigate slideshow. Gray handle indicates start point of drag action (see image below and to the right).

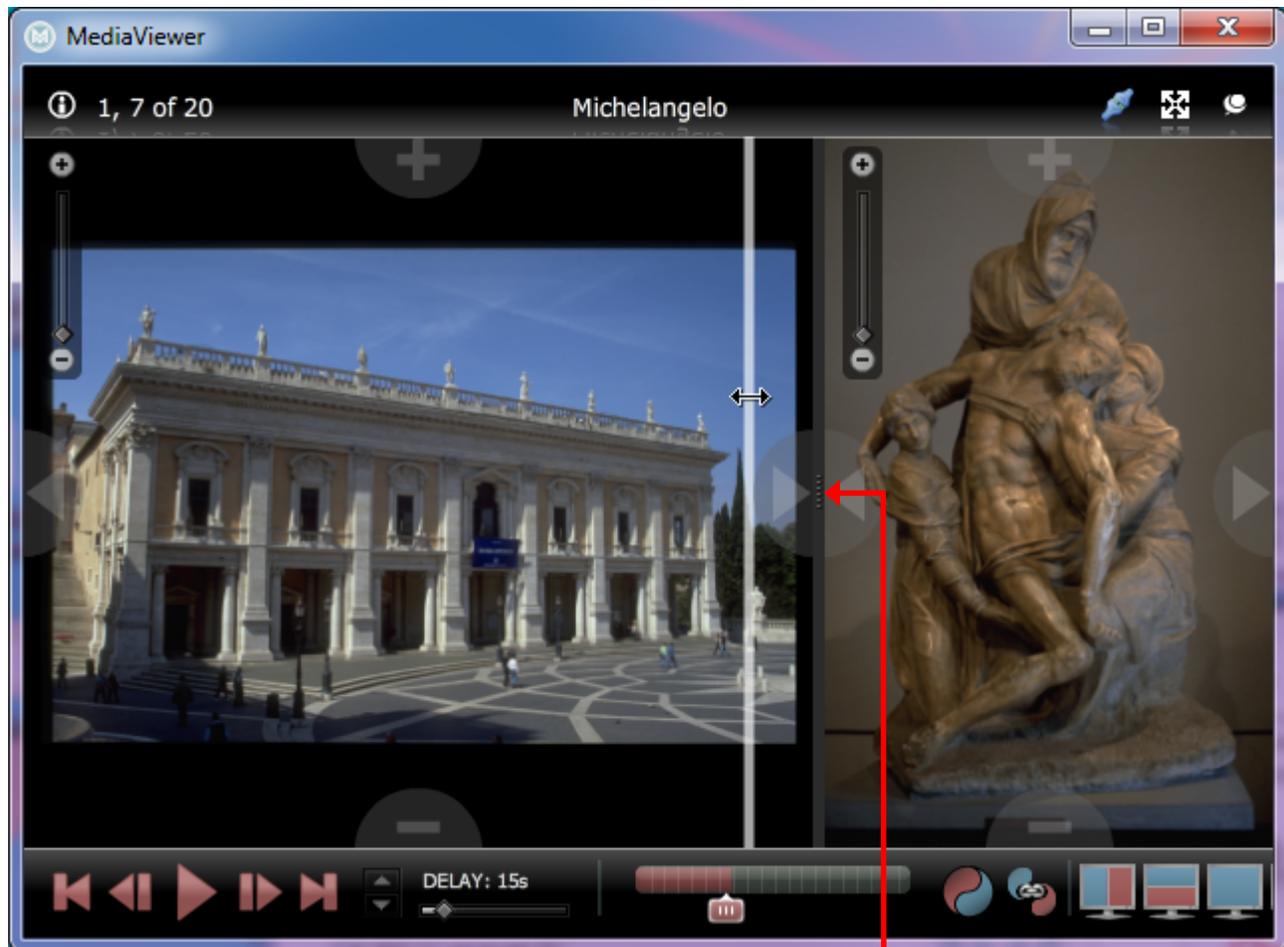

In this figure, display is split and user has bound application bar to secondary display. Click the leftmost yin-yang button to bind application bar to primary display.

In this figure, display is split and user is navigating slideshow in pairs. Click the rightmost yin-yang button to break pair-wise navigation.

Split Display Divider Control

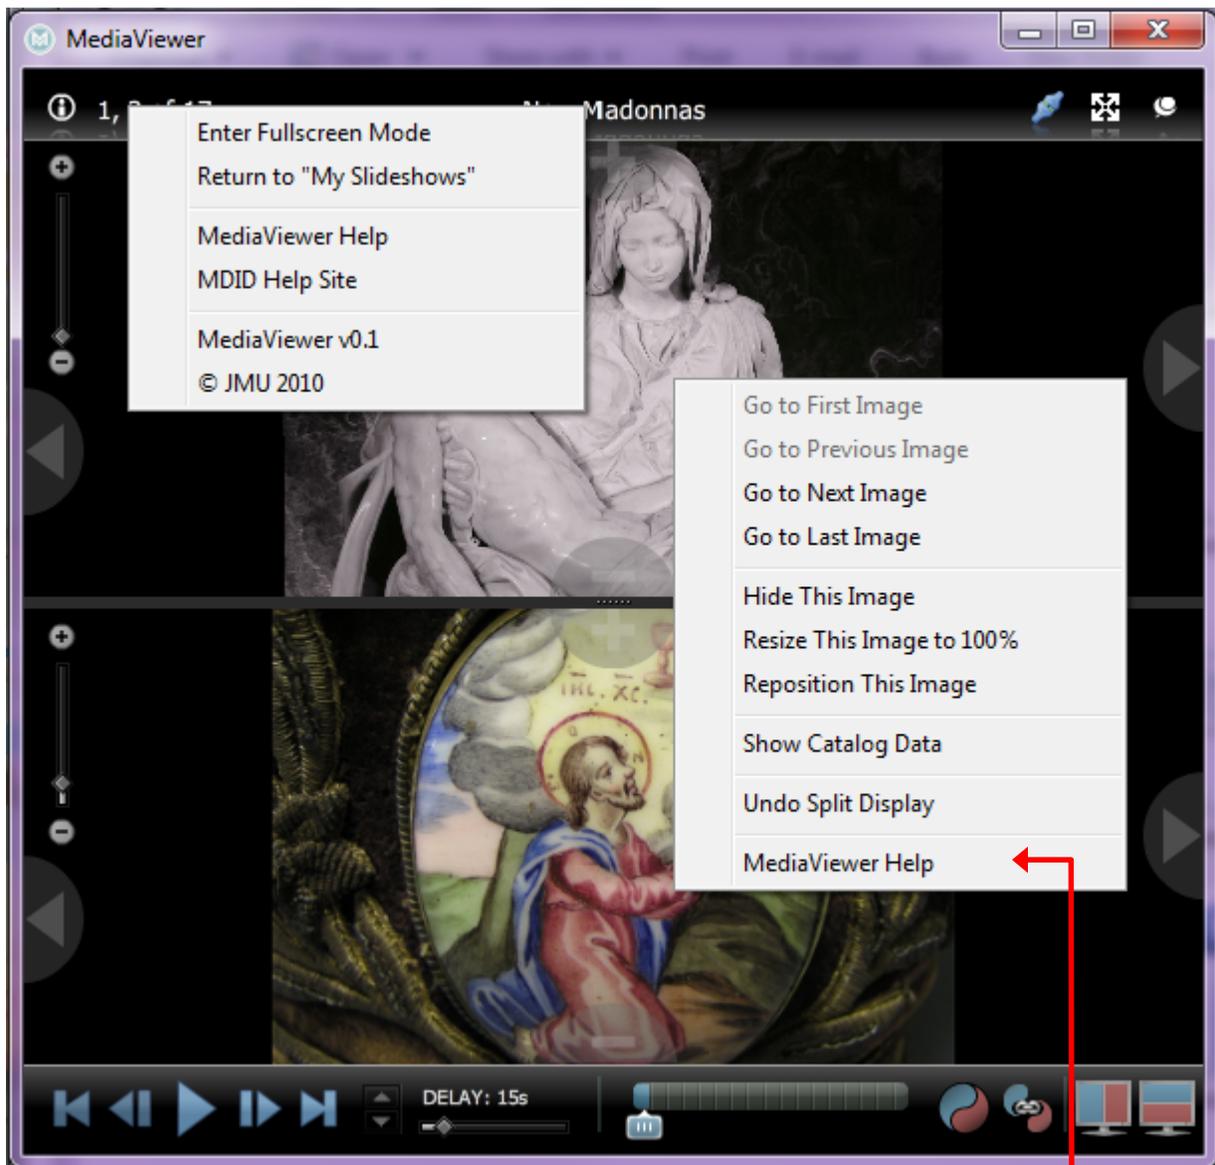

In split display mode, press and drag divider control to resize displays relative to each other. Note that the application bar is bound to secondary display.

MediaViewer Help [p.8]

Split Display Divider Control

Right-click menus are context-sensitive. When mouse is over a display area, the right-click menu will contain items for navigating the slideshow, for zooming in and out, and for showing or hiding the image and its catalog data. Hover over the top bar or application bar for another set of functions.

This right-click menu controls the top display
