

## **Sociolinguistics Laboratory Sanitization Guidelines**

### **COVID-19 prevention protocols**

11-09-2020

**Keyboards, mice, and work surfaces** should be cleaned both before and after each use. Clorox, Lysol, or other alcohol-based disinfecting wipes are best.

**Glass monitors** may be cleaned with any surface cleaner, including wipes. LCD screens should not be touched at all, and cannot be cleaned without specialized products; the area around controls to LCD monitors, however, should be sanitized using alcohol wipes.
