Emerging Issues in Biological Futures II: A Panel Discussion on Global Health

Biological Futures in a Globalized World brings together scholars from across the humanities, social sciences, and natural sciences to explore the current and future impact of bio-technology on human affairs.

In “Emerging Issues in Biological Futures II: Global Health,” panelists describe a range of active research projects, focusing on how pressing questions about global health can be informed by inquiry into the interfaces of biology, biological change, and globalization.

The panel, moderated by **Matthew Sparke** (International Studies), features:

- **Celia Lowe** (Anthropology) on security in the viral cloud, and H5N1 in Indonesia
- **Luke Bergmann** (Geography) on geographical context and H5N1 evolution
- **Meg Stalcup** (Center for Biological Futures) on health systems and interventions

Sponsored by the Simpson Center for the Humanities at the University of Washington and the Center for Biological Futures at the Fred Hutchinson Cancer Research Center. For more on Biological Futures and the 2011-12 Colloquia series, visit: <http://depts.washington.edu/uwch/biofutures1011.html>.
