

Are you a Colon Cancer Survivor?

The University of Washington Tumor Vaccine Group is studying how the body's immune system fights cancer. We are developing tests to help measure immune response in order to create vaccines and immune therapies for cancer. One way we can do this is by collecting blood from cancer survivors.

We need survivors to donate blood.

We will perform a one time blood draw of less than one cup.

Inclusion criteria:

- 18 years of age or older
- Cancer diagnosis within the last 5 years
- Currently not receiving cytotoxic chemotherapy
- No active autoimmune disease
