Improving peer review for the next generation of scientists

As the 2018 National Academies report on next-gen researchers noted, peer review—in grants and in publications—has challenges. Busy people pressed for time make life-changing and science-changing decisions. How does the system work now, what needs to change, and how can we all work to enhance the integrity of the system as writers and reviewers?

Dr. Biggins was a member of the National Academies committee examining these issues and will share ideas from national conversations along with her years of experience as reviewer, mentor, and funded researcher.
