

Julianne Dalcanton was educated in the Pittsburgh Public School system, and then did her undergraduate work in physics at [MIT](#). After working briefly in industry, she returned to school and earned her PhD in astrophysics at [Princeton](#). She was a Hubble Fellow at the Observatories of the Carnegie Institution of Washington (which, strangely enough, is in Pasadena) before joining the faculty at [UW](#) in 1998. For her research, she works on galaxy formation and evolution, using a mix of both theory and observation, most recently with the Hubble Space Telescope. She enjoys teaching both large introductory undergraduate courses and small specialized graduate classes.
