

started notes @ ~ / Dam

waiting on new HW putting doc'ation on web

server can't quite handle

FME used to help combine

UW can't share yet

not  
binding  
doc.

Statement of intent trying to get countries to re-share  
their data to the whole state

go back to countries w/ this doc to tell what doing w/ data

this doc can make/break state wide dataset

the clearer this doc the better the chances of getting participation

only have county data so far

Cadastral WG wants to share on website for examples  
for others

→ not "really" signing in a legally binding way

this is not a legal contract

so many countries have verbal sharing agreements

want historical record

biggest concern who shares data w/ non-govt

complexity of data - could lose geometry; go to shapefile

how actually share

Feature Service? geo database

think about user needs

## Next steps

SOI will go to AG then send mid-April  
David + Luke will make A's + share before it  
goes to AG

Another opportunity against Tax assessor

Doherty 1/4ly mtgs might be able to share  
@ Tax assessor mtg

## Action

Update + distribute new draft of SOI

Question give data back to county?

how can we value add our products back?

OW has setup a system to ~~store~~ track this  
might be able to provide the actual sharing  
mechanism might be able to develop this over time  
list of what can be obtained vs what can actually be  
downloaded      Setup to track a list of  
who to contact for data derivative

Make decision what can share when FOIA data request  
by Parcels WG is not becoming a data steward, this  
all requests for this dataset from outside the PWG  
will be redirected to the data originator.
