

WRAPSTAT

June Update

WrapStat

WrapStat Configuration

This month we are highlighting a new feature in Wrapstat – your unique configuration. Prior to accessing the system, we at WERT will work one-on-one with each licensee to identify your data needs, and set up a configuration structure to best meet those needs. WrapStat has up to four structural levels (*site, agency, organization, collaborator*) that can be used to help stratify the data you collect. The levels will allow users higher up in the structure to view data for the levels below.

This configuration feature will make it easier to manage your data and allow for more data stratification, sorting, and filtering in reporting. Please see the two examples below of how different licensees can be set up. In August, we will release an in-depth video about setting up a structure.

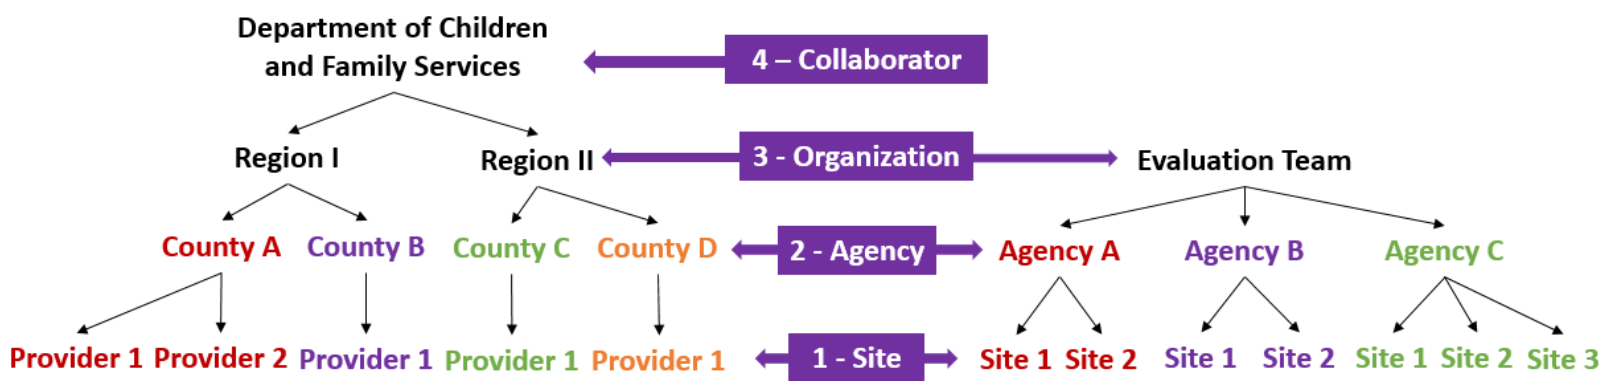

CHECK OUT OUR TOOLS

For those who have not reviewed the full range of Wraparound Fidelity Assessment System (WFAS) tools, [check them out here](#).

EXAMPLE 2

WrapStat Pilot Testing

We are excited to announce that we have selected six sites around the country to participate in WrapStat user testing. User testing started this month and will run through the summer.

A big thank you to all who reached out expressing interest in being a pilot site. We appreciate everyone's enthusiasm about this new system and look forward to sharing it with you soon.

WFAS Tool Update!

We have updated our WFAS tools - WFI-EZ, TOM 2.0 and DART – to have more gender inclusive options in the demographic section. Please [check out the newly updated tools here](#). These changes will be reflected in WrapStat. Feel free to reach out with any questions.
