Course Title: BMSD 520 – Research Seminar

Instructor: Zheng, Ning

Credits: 1, max 30

UW General Catalog Course Description: Group conferences on graduate student research. Prerequisite: BPSD graduate student, or permission of instructor. Offered: AWSp.

Recommended Background:
Involved in graduate research.

Overview:
BMSD 520 is a 1 credit class for credit/no credit. All students enrolled in the BPSD graduate program and all current trainees of the Molecular Biophysics Training Program including the Hurd Fellow are required to register for BMSD 520 in Autumn, Winter, and Spring quarters. The course meets up to once a week for 50 minutes, although fewer meetings might be required in some quarters. In each meeting, two students present their original research project for 20 minutes and take questions for 5 minutes. All other students in the class provide written critiques for each speaker, to improve presentation skills.

Textbooks:
none

Learning Objectives:
By the end of the course, students should be able to:
- Discuss a wide range of biophysics research with peers.
- Give a good quality presentation of his or her research.

Topics Covered:
1. Molecular Biophysics
2. Biological Physics
3. Biological Structure
4. Biological Design

Assignments and Grading:

Critiques of Research Presentations: (100%)
Students are graded pass/fail on written critiques providing feedback to each speaker in the seminar series. In addition, based on their program requirements, some students will be required to give one of the research seminars. In this case, the presentation replaces the two critiques for that day. Students must pass 100% of the critiques to pass the class. A student must notify and obtain permission from the course instructor if he or she cannot attend a session due to health or family emergencies or work-related travels. All students may miss one class without instructor permission in each quarter. Students who miss more than one class without instructor permission can make up each missed class either by attending the BPSD rotation presentation during the finals week and writing critiques for four talks or by attending an outside research seminar and preparing a one page report, which describes the presentation, the question(s) asked by the student, and the answer given by the presenter.
Access and Accommodations:

Your experience in this class is important to us, and it is the policy and practice of the University of Washington to create inclusive and accessible learning environments consistent with federal and state law. If you experience barriers based on a disability or temporary health condition, please seek a meeting with DRS to discuss and address them. If you have already established accommodations with DRS, please communicate your approved accommodations to your instructor at your earliest convenience so we can discuss your needs in this course.

Disability Resources for Students (DRS) offers resources and coordinates reasonable accommodations for students with disabilities and/or temporary health conditions. Reasonable accommodations are established through an interactive process between you, your instructor(s) and DRS. If you have not yet established services through DRS, but have a temporary health condition or permanent disability that requires accommodations (this can include but not limited to; mental health, attention-related, learning, vision, hearing, physical or health impacts), you are welcome to contact DRS at 206-543-8924 or uwdrs@uw.edu or disability.uw.edu
