Examining Community-Institutional Partnerships for Prevention Research
Project Fact Sheet

Project Description
The project ran from October 1, 2002 – December 31, 2005 with funding from the Prevention Research Center Program Office through a cooperative agreement between the Association of Schools of Public Health and the Centers for Disease Control and Prevention.

The project aimed to identify and synthesize what is known about community-institutional collaborations in prevention research and develop and evaluate strategies to foster community and institutional capacity for participatory research at national and local levels. The project's ultimate goal was to facilitate approaches for effectively translating community interventions in public health and prevention into widespread practice at the community level.

Project Partners
- CDC Prevention Research Centers National Community Committee
  Project Representatives: Ella Greene-Moton and Yvonne Lewis
- Community-Based Public Health Caucus of the American Public Health Association
  Project Representatives: Renee Bayer and Adele Amodeo
- Community-Campus Partnerships for Health (project coordinator)
  Project Representatives: Sarena Seifer, Kristine Wong and Annika Robbins
- Community Health Scholars Program
  Project Representatives: Diane Calleson and Renee Bayer
- Detroit Community-Academic Urban Research Center
  Project Representatives: Barbara Israel and Robert McGranaghan
- Harlem Community & Academic Partnership
  Project Representatives: Princess Fortin and Ann-Gel Palermo
- Seattle Partners for Healthy Communities
  Project Representatives: Kirsten Senturia, Alison Eisinger, and Gary Tang
- Wellesley Central Health Corporation
  Project Representatives: Sarah Flicker
- Yale-Griffin Prevention Research Center
  Project Representatives: Kari Hartwig and Maurice Williams

Project Outcomes and Components
During the first year of the project (2002-2003), the Project Partners collaborated to examine and synthesize existing data they already had available on community partnerships for prevention research. The first year’s activities yielded a report that,
- defines “successful community-institutional collaborations in prevention research”;
- identifies factors that can facilitate and impede these successful relationships and outcomes; and
- presents recommendations and strategies that can build the capacity of communities, institutions and funding agencies to engage in successful community-institutional partnerships for prevention research.

Major Findings
Characteristics of Successful Partnerships
- Trusting relationships
- Equitable processes and procedures
- Diverse membership
- Tangible benefits to all partners
- Balance between partnership process, activities and outcomes
- Significant community involvement in scientifically sound research
- Supportive partner organization policies and reward structures
- Leadership
Culturally competent and appropriately skilled staff and researchers
Collaborative dissemination

Ongoing partnership assessment, improvement and celebration
Sustainable impact

Barriers to Successful Partnerships
- When characteristics above are absent
- Funding mechanisms, policies and procedures
  - Limited funding sources
  - Funding agency requirements, definitions, timelines and reviews
  - Lack of funding and funding mechanisms that specifically support community as research partner

Recommendations – The complete report from Year 1 outlines:
- Partnership-focused recommendations
  - At the level of the partnership (these are highlighted below)
  - At the collective level across partnerships
- Institution-focused recommendations
- Community-focused recommendations
  - At the level of the community partner
  - At the collective level across partners
- Funding agency-focused recommendations

Recommendations at the level of the partnership
- Pay close attention to membership issues
- Develop structures and processes that help develop trust and sharing of influence and control among partners
- Provide training and technical assistance to partners
- Plan ahead for sustainability
- Pay close attention to the balance of activities within the partnership
- Be strategic about dissemination
- Invest in ongoing assessment, improvement and celebration

During the second year of the project (2003-2004), the project partners created two working groups which designed and implemented two specific strategies for building community and institutional capacity for participatory approaches to prevention research:
- Policy Working Group worked to implement policy recommendations by developing collaborative relationships with and working with funding agencies work to support partnership infrastructure and assess partnerships in proposals
- Training Working Group developed and tested a curriculum training module for partnerships on developing and sustaining community-based participatory research partnerships.

During the third year of the project (2004-2005), the project partners completed the Curriculum Training Module for Developing and Sustaining Community-Based Participatory Research Partnerships and pilot-tested it through a 4-day training intensive institute for partnership teams held in August 2005. Portions of the curriculum were offered in a variety of formats, including a pre-conference workshop at the Community-Campus Partnerships for Health conference and a half-day continuing education institute at the American Public Health Association conference. Print, CD-ROM and online versions of the curriculum will be available in 2006. It is also possible to arrange customized delivery of some or all of the curriculum. Contact the principal investigator at the email or phone below for more information.
