

# Composite Structural Engineering Safety Awareness Course Development

Charles Seaton

Wichita State University

# Agenda

- Background
- Overview of education and training through FAA sponsorship and guidance
- Structural engineering course development process
- Hands-on laboratory
- Course format concept

# Background

Extracted from Larry Ilcewicz slide presentation at CACRC (2010)

## How Can FAA Reduce Composite Concerns?

- **Promote standardization**
- **Develop guidance that recognizes safety concerns with industry push to minimize costs**
- **Establish safety awareness education for FAA Workforce (FSDO, ACO, MIDO, industry designees)**
- **Continue to benchmark the industry groups and members showing leadership for safe composite applications**
  - Standards organizations (CMH-17, CACRC, ASTM)
  - Applicants that portray leadership as “Model Citizens”
  - FAA/EASA/Industry Workshops

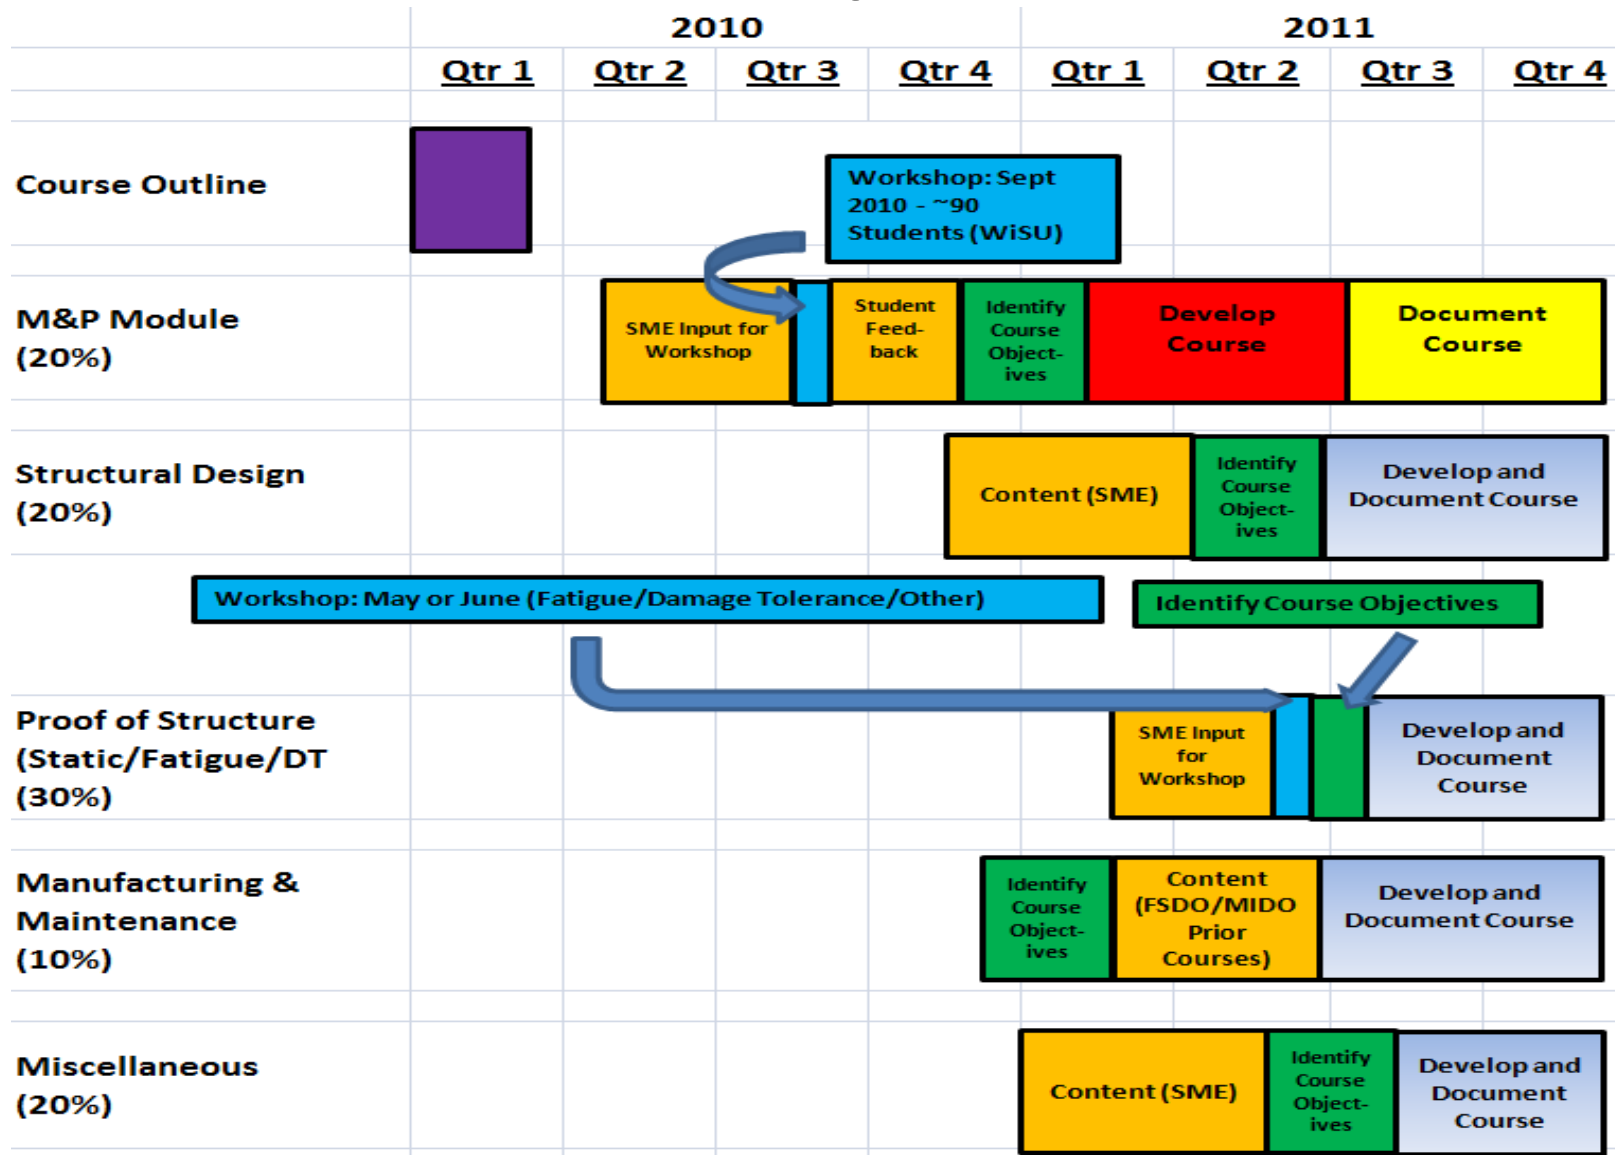

*Presentations, recaps and breakout session summaries at:*

# Overview of FAA Education Development

	<u>2004</u>	<u>2005</u>	<u>2006</u>	<u>2007</u>	<u>2008</u>	<u>2009</u>	<u>2010</u>	<u>2011</u>	<u>2012</u>
Maintenance (FSDO)	TCOs	Content			Course Dev.	Implementation			
Education Strategy					Strategy				
Structural Engineering (ACO)							Outline & Content	De ve- lop	Implementation
Manufacturing (MIDO)								Course Dev.	Implementation

# Course Development Process

# Laboratory

- Concept: 3-Day hands-on, following content
- Composites Technology
  - Build 'take-home' component (e.g. clipboard/wall plaque)
  - Exposure to manufacturing process (work instructions, layup, bagging, autoclave, machining)
- Composites Maintenance
  - Documentation (SRM)
  - Essential processes (Preparation (drying), Scarf/bolted repair techniques, hot bonder use)
  - NDT evaluation

# Draft Format

- Online teaching format (Blackboard/eCollege/FAA Proprietary (?))
- Contextual learning
  - Laboratory
  - Discussions/interactions among students and subject matter experts (asynchronous online)
  - Case studies

# Transport Flap Case Study

250°F film adhesive  
well over 6"  
diameter

Incorrect film  
adhesive (SRM  
limits to 6 inches)

Burn marks on  
upper skin from  
overtemping during  
hot bond repairs.

Improper use/location of  
thermocouples resulted in  
overheating
