Full Intensity SQ Heparin

Guidelines for Fixed Dose, Full Intensity SQ Heparin

- Unfractionated heparin (UFH) 250 units/kg SQ q12h with no aPTT monitoring
- Consider 333 units/kg SQ loading dose for treatment of acute thrombosis
- Do not use for treatment of arterial thrombosis (eg. AF, valve replacement, etc.)

Guidelines for Adjusted Dose, Full Intensity SQ Heparin

Initial Dosing

Starting therapy with adjusted-dose SQ heparin

- Give UHF 240 units/kg SQ x 1
- Check aPTT 6 hours after first dose
- Adjust dosing according to chart below

Converting from continuous infusion heparin to adjusted dose SQ heparin

- Calculate 24hr dosing requirement necessary to maintain therapeutic PTT
- Divide into two q12h doses
- Discontinue IV heparin and administer first SQ dose within 1 hour
- Check first PTT 6 hours after first dose
- Adjust dosing according to chart below

Converting from warfarin to adjusted dose SQ heparin

- Discontinue warfarin
- Give heparin 240 units/kg SQ when INR < lower limit of therapeutic range
- Check aPTT 6 hours after first dose
- Adjust dosing according to chart below

Maintenance Dosing Adjustments

Therapeutic Monitoring

- Baseline: CBC, PT/INR, PTT
- First 2 weeks of therapy: CBC q2-3 days
- Chronic therapy: CBC q1-3 months
