Post-Final Challenge Debrief

- Was it fun?
  - Students pretty much always answer 'yes' here.

- Was it frustrating?
  - Universally, I know that the actual answer is 'yes', since I've worked with the students on problem-solving throughout the project. However, students are answering this question from the point of view of having struggled and ultimately been successful. The result is that they reflect positively on their frustration, and talk about their problem-solving strategies.

- What do you think was the most difficult part?
  - Answers here are usually about programming.

- What did you learn?
  - Surprisingly, students tend to focus on the individual skills such as machine vision or how servos work, rather than problem-solving strategies in general.
