

This is the final reflection for the IT in Society/Computing in a Global Society/Cross-Cultural Software Engineering course. We apologize for the lateness of the posting of it, but we wanted to wait until most of the work was completed in order to really have a reflection on the whole project.

The final reflection is part of the individual part (6hp) of the ITIS course at UU, part of the individual grade component of the Computing in a Global Society course at RHIT, and part of the individual grade component of the Cross-Cultural Software Engineering course at Gannon University. It is mandatory for all students.

The reflection should be at least two pages. We want you to cover the following topics. Please note that you will be asked to discuss your teammates on an individual level, so we want to assure you that your comments, which should be honest and professional, will be read solely by the faculty of the course and will not be shared with any other student.

Personal

- Your expectations at the start of the project
- Your contributions and experiences during the project
- How you spent time, including reflecting on useful vs. wasteful time
- What you could've done better
- The importance of the type of project for your contribution, e.g. a real project and it being in the health sector

Team

- The contribution of your team
- The collaboration within your team and your work together
- Your participation in your team
- The perception of the other team members' attitudes to the course and if that influenced your commitment and contribution
- How would you place your own workload and attitude as compared with your teammates? Please elaborate on the differences and why it turned out that way.

Project

- The organization of the project
- The coordination of the groups
- Collaboration with the students from the other schools
- The value of the report and the project
- The value of the presentation and the manner in which it was given

Peer Reviewing

- Was it useful?
- Did you take into account the feedback you got? Why or why not?

Learning

- What you learned or experienced that was useful for you. In what ways did this project help you to develop?
- How you succeeded in achieving the graduate skills identified as your personal goals and if you took the opportunity to learn something else, and if so what
- Your ability to work in an open ended problem scenario

Please send the reflections to all of us by Friday, December 19.

This part of the course will be concluded with a meeting with Cary, Can, Steve, Mats, or Åsa after having handed in the reflection.

God Jul/Merry Christmas

Cary, Can, Steve, Mats, Åsa, and Anne
