

Embedding a Google Calendar in Your Website

Using Google for calendaring functionality is an easy way to manage course tasks and assignments, and embedding it in the standard iSchool course template is a relatively simple process.

Once you have created a new Google calendar from within your Google account (at <http://www.google.com/calendar/>) and populated it with appointments, click the down arrow next to the calendar you want to embed in the calendar list on the left, and select **Calendar settings**.

Copy the code displayed in the **Embed This Calendar** Section

Paste this code into your website using the code editor of your preferred web design program.

Embed This Calendar
Embed this calendar in your website or blog by pasting this code into your web page. To embed multiple calendars, click on the Customize Link

Paste this code into your website.
[Customize the color, size, and other options](#)

```
<iframe src="http://www.google.com/calendar/embed?src=benjamminid%40gmail.com&ctz=America/Los_Angeles" style="border: 0" width="800" height="600" frameborder="0" scrolling="no"></iframe>
```

The standard dimensions and colors may not work for all templates and situations. If you'd like to customize your embedded calendar, click the **Customize the color, size, and other options** link above the iframe field to access the **Google Embeddable Calendar Helper**. Carefully select your options in the Calendar Helper and paste the customized iframe code in your website.

To display events from multiple calendars in the same embedded calendar, simply follow the instructions above to access the **Google Embeddable Calendar Helper**. Then, select the checkbox next to each calendar you wish to display, in the section **Calendars to Display**.
