

Intervening with Children with **FETAL ALCOHOL SPECTRUM DISORDERS** Research Consortium

In response to the Children's Health Act of 2000, the Centers for Disease Control and Prevention (CDC) provided funding to develop, implement, and evaluate interventions appropriate for children with fetal alcohol spectrum disorders (FASDs) and their families. Each intervention was designed to improve the developmental outcomes of individuals with FASDs, reduce secondary conditions, and improve the lives of families affected by FASDs. More information about specific interventions can be obtained from:
