Global WACh makes **scientific discoveries, cultivates leaders, and bridges disciplines** to advance the tightly connected health and well-being of **women, adolescents, and children**

**Who We Are**

---

**Our Scientific Priorities**

Our team specializes in randomized control trials and mixed-methods approaches to contribute to science in the following domains:

- **Family Planning Decision Support**
- **Gut Health and Child Survival**
- **HIV and Co-Infections Through the Lifecycle**

Expertise in epidemiology, biostatistics, implementation science, and qualitative methods enable Global WACh to produce high-quality evidence that is meaningful to policy makers and practitioner.

---

**Where We Work**

- Bangladesh
- Benin
- Ethiopia
- India
- Kenya
- Malawi
- Mali
- Pakistan
- Tanzania
- Uganda
- United States

---

**Partnering Departments**

- Department of Global Health, University of Washington
- UW Medicine Department of Obstetrics & Gynecology
- Department of Pediatrics, University of Washington

---

**2018-2019 Report**

- **18** Core Faculty
- **40** Staff & Student employees
- **35** Active grants
  - **$9.58 Million** direct costs on research grants
  - **$4.6 Million** subcontracted to partnering institutions
- **32** New proposals submitted
- **14** New awards funded
- **344** Credit hours taught for undergraduate and graduate students
- **80** Publications
Our Science

Ensuring children meet their growth potential

Experts in childhood growth and nutrition work to develop approaches to identify and treat undernourished children and help prevent infections that threaten their growth. Our teams work closely with healthcare providers, parents, and communities.

Leading discovery in adolescent engagement in HIV prevention and care

Our team invents and tests new approaches to train adolescent health care providers, offering HIV prevention tools like PrEP to adolescents, and connecting youth living with HIV to peer and clinical support through mobile technology.

Shaping how we treat critically ill children in resource limited settings

Global WACH researchers discover root causes of and optimal treatment for children sick with diarrheal disease, tuberculosis, cytomegalovirus, and other infectious diseases. The team examines strategies for delivering treatment and preventing future cases of these life-threatening infections.

Building tools to support women’s reproductive health decisions

Scientists at Global WACH build tools to help women make informed choices around planning their families. Our team conducts research to understand experiences and preferences of women using family planning to highlight needs for future interventions and tools to support them in reaching their goals.
