

# Alzheimer's Disease Family-Based Study

JOIN TODAY!

## Study Purpose

There are no great treatments for dementia. In this study, we seek to learn more about the genetic causes of dementia so that treatments can be developed to prevent, cure, or better address the symptoms of these diseases.

## Am I Eligible?

- You do **not** need to have memory problems in order to participate.
- At least **two** people in your immediate or extended family have to have had Alzheimer's disease or another form of dementia.
- At least **one** person in your family with dementia must be currently interested in participating.
- Each participant must have a "study companion" who can answer questions about the participant.

## What Is Involved?

- Brief memory and thinking tasks
- Health, activity, and family questionnaires
- Companion questionnaire
- One-time blood draw
- Repetition of assessments every 1-2 years

The Principal Investigator of this study is Dr. Debby Tsuang at S-182 GRECC, VA Puget Sound, 1660 S. Columbian Way, Seattle, WA 98108
