An Update on Lecanemab for Early Stage Alzheimer's Disease

Patients, families, and the wider community are invited to talk about the current amyloid monoclonal antibody therapy Leqembi (lecanemab) and Kisunla (donanemab) for the treatment of Alzheimer's.

Come learn from our panel of experts which include, Dr. Thomas Grabowski, Dr. Michael Rosenbloom and clinical trials coordinator Darla Chapman, ARNP.

- Who is eligible for these treatments?
- What are the risks and benefits?
- What is the process if you're interested in these medications?
- What is the impact of this medication as well as similar ones in the pipeline for the clinic community and research?
- How has it been going for those patients who have been given the Leqembi infusion?
