When It Comes to **Alzheimer's**, It Helps to Have a Team

The image depicted contains models and is being used for illustrative purposes only.

If you or someone you love is increasingly becoming forgetful, experiencing difficulties in planning and problem solving, or getting lost in familiar places, these could be signs of early **Alzheimer's disease**.

Contact us today to find out more about the **evoke/evoke+** clinical studies.

Consider participating in the study if:

- ✓ You (may) have early Alzheimer's disease.
- ✓ You are between 55 and 85 years old.
- ✓ You have a study partner (a next of kin or someone you have a close relationship with), who is willing to take part in the study and share information about you.

The study doctor will explain any potential risks to you and describe the study procedures before you decide whether to join the study.

If eligible, you will be one of over 3500 participants worldwide on this 3-year journey and will receive regular clinic visits, health checkups, and medical testing. You will get access to expert guidance and facilities during the study.

**To find out more about participating in the
evoke and evoke+ studies, please contact:**
